SAP Ariba /\\

Feature at a Glance
Language translations for custom fields

Roberto Valdovinos, SAP Ariba
Target GA: June 2018

SAP **Run Simple**

Feature at a Glance
Introducing: **Language translations for custom fields**

Customer challenge

While the standard fields in the posting configuration template are shown to the supplier based on their locale language, the custom fields added by the buyer are shown to all suppliers in the same language the label was edited.

Meet that challenge with
SAP Ariba

With this feature, administrators can upload language translations of custom field names created in a posting configuration template so that suppliers can view the translated labels on the Provide Your Quote page.

Quote automation provides a CSV template file which administrators can download and then edit it with the required language translations and then upload them to the specific posting configuration template. You can upload only one translation file for each language in each posting configuration template.

Experience key benefits

Suppliers can now receive all the request for quotation information in their local language.

Solution area

Operational Procurement / Ariba Network / Quote Automation / Buyer

Implementation information

This feature is "on" by default for customers of **Quote Automation.** No action is required to utilize this feature.

Prerequisites and Limitations

LIST types are not supported with this release

Since the Standard template provided by quote automation does not have any custom fields, this template does not support translations

Language translations for custom fields

Template Fields

Attribute ↑	Type	Value	Buyer's Initial Value	Initial value	Response Required	Supplier can edit
Attachment	Attachment				No	Yes
Buyer Part ID	Text				No	No
Comment	Text Area				No	Yes

Translation Template: Translation_Template.csv

Upload Translation

After the creation, of the template, for each language that your supplier may bid in, you can upload the custom field in the language appropriate for them to understand. For example, you can choose Korean and then download the template which lists all the custom fields. Add the translations for Korean as you would like the supplier to see and upload.

If a file is uploaded, it will be shown here as well when you pick the language

Language translations for custom fields
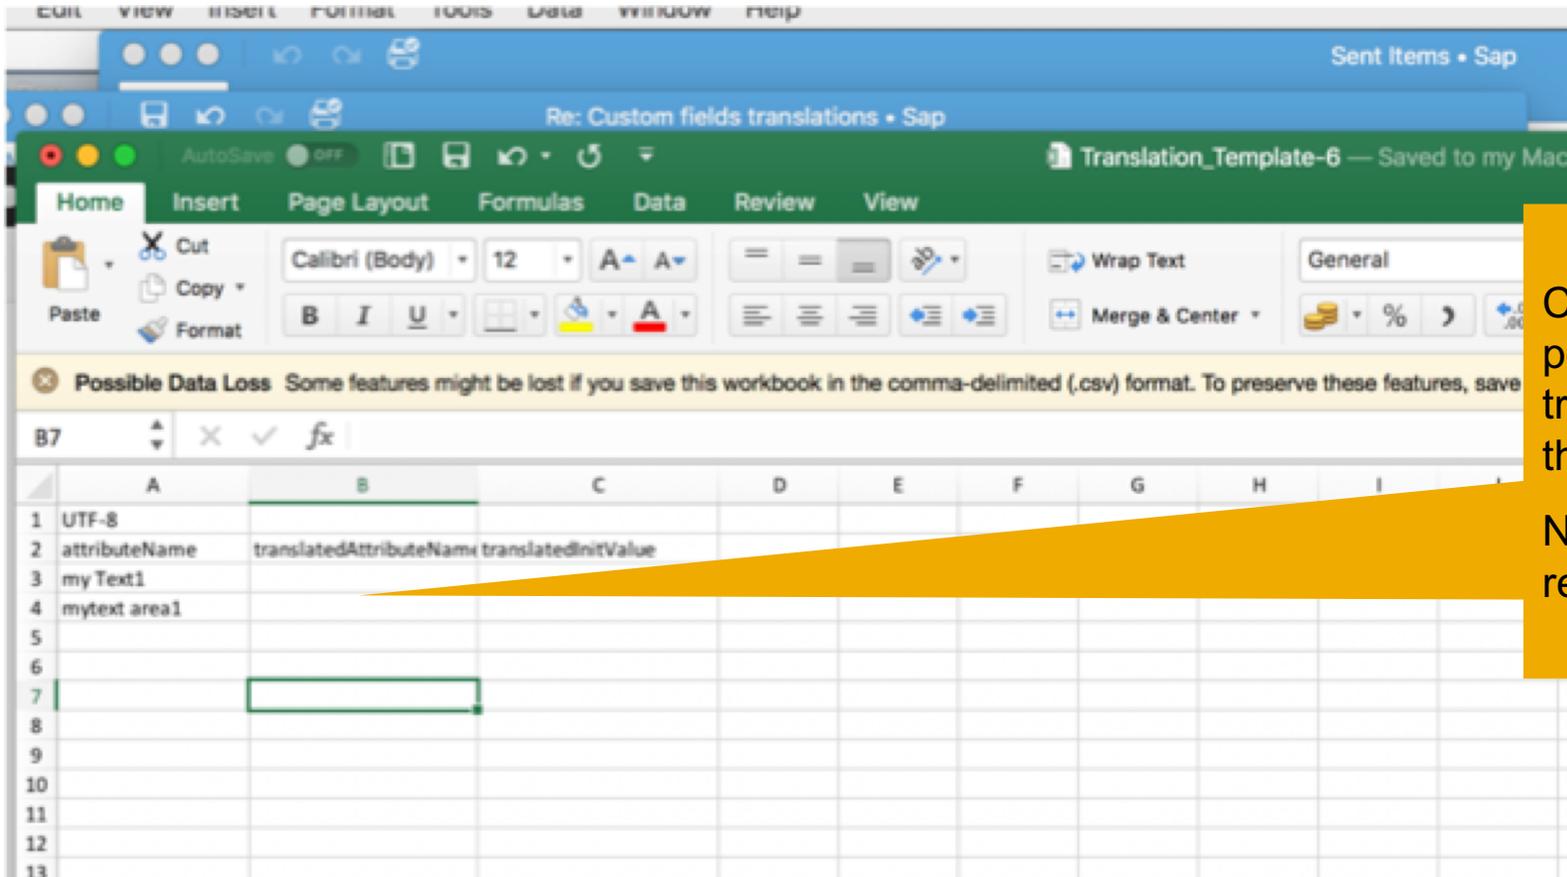

Custom fields will be automatically populated in English. Fill in the translated name and the default value in the target language chosen.

Note: List type is not supported in this release

Language translations for custom fields

Translated values will be shown to the supplier on login.

Note: Buyer will continue to see the responses in their own language. This will be implemented separately.
