Customer challenge

It has been identified that some improvements are needed to make the service procurement process easier and quicker. In addition to that some additional fields are needed to give to the buyer more information to improve the approval process.

Meet that challenge with SAP Ariba

The following functionalities have been included with this feature:

1. Additional field to display service description on SES/Invoice page.
2. Provide an option to the supplier to select/unselect lines from the service sheet like there is for invoices.
3. Make the delete option as a button, like it does for Invoices.
4. Display the service sheet number auto generated by SAP ECC as read-only at header level on the service sheet page.
5. If the supplier excludes a service line on the service sheet, then those lines should not be validated.

Experience key benefits

The supplier will have a more user friendly experience in creating Service Entry Sheets for suppliers that also resembles more to the experience of creating Invoices.

The buyer will be provided with additional information for his approval process.

Solution area

Operational Procurement / Ariba Network

Implementation information

This feature is “on” by default.

The service description field is sent on the cXML, but needs to be mapped to ERP on integration layer.
