SAP Run Simple

Feature at a Glance

Introducing: **Enhancements to Japan eDocument Act**

Customer challenge

The previous eDocument feature for Japan lacked two key functionalities required during the audit process. First is the ability to search and download data. This becomes especially important for auditors dealing with massive search results. Second is the ability to archive documents for 11 years and 1 month as opposed to 10 years. Taking into consideration the lead time for audits, the feature will now support archival for an extended period of time.

Meet that challenge with
SAP Ariba

- Total number of search results shown in UI
- Maximum search range to be extended to 1 month
- User can identify which batch of search results they want to download (e.g. download result #1-1000, #1001-2000, etc.)
- Document archived for 11 years and 1 month as opposed to 10 years.

Experience key benefits

The user experience for auditors will be significantly improved given these updates.

Solution area

Ariba Network

Implementation information

This feature is "on" by default. Buyer and Supplier Admin users also need to enable this rule in Ariba Network.

Prerequisites and Limitations

- Users must have Long-Term Archiving turned on to use this feature.
- Invoice must have one of the following addresses located in Japan; Sold to, Ship to, or Supplier location
