Introducing: Display classification domain and code in POs

Customer challenge

Ariba Network currently does not display classification domain nor code on line items. If they are present on the incoming cXML document, they are only copied over from PO to invoice. This information is important to suppliers for accurate fulfillment of buyer's purchase orders.

Meet that challenge with

SAP Ariba

Display the classification domain and code on the purchase orders UI, if they are available in the Purchase Order cXML at the line item level.

Experience key benefits

Suppliers will now be able to view item classification domain and code at the line item level on the Purchase Order UI. This will result in a more complete and accurate information for Purchase Order fulfillment.

Solution area

Operational Procurement / Ariba Network

Implementation information

This feature is "on" by default.

Prerequisites and Limitations

None
