SAP Ariba

Feature at a Glance
Ability to export master data lookup keys in Custom Forms API

Arundhati Kumar, SAP Ariba
Target GA: February, 2019

THE BEST RUN **SAP**

Feature at a Glance
Introducing: Ability to export master data lookup keys in Custom Forms API

Customer challenge

The Custom Forms API does not display the Unique ID for the master data fields available within custom forms. Currently for data elements like Company Code, Cost Center, On Behalf of, the name/description is being returned in the API but not its unique ID.

Meet that challenge with
SAP Ariba

Custom forms new API version (v2) will now provide a way to export master lookup keys along with other master data to send to an external system or for reporting purposes. For ex. lookup keys can be the unique name and password adapter for users, and domain and unique name for commodity codes.

Experience key benefits

With the ability to export master data lookup keys in addition to name and description, customers can use this in data in subsequent processes and reporting. Customers can report on Custom Forms data externally with respect to their Master data elements and can use Custom Forms data in their secondary processes outside Ariba.

Solution area

SAP Ariba Buying and Invoicing
