THE BEST RUN **SAP**

Feature at a Glance

Introducing: **RFQ information included on PR's and PO's**

Customer challenge

Previously, when guided buying converted a supplier quote into a request, it didn't record the RFQ ID or the quote line number or indicate which line items came from request forms or RFQs. However, you might need to export this information to enable quote-to-purchase-order matching in your internal business systems.

Meet that challenge with
SAP Ariba

Now, guided buying includes this information in the requisition and purchase order data models. It identifies the RFQ ID and line number, the quote ID and line number, whether the line items comes from a request form or an RFQ, and the touch flow that was used (self-service or low touch/high touch).

Experience key benefits

Now buying organizations can export this information to their ERP systems to maintain alignment on documents and ID information.

Solution area

Guided Buying

Implementation information

This feature is automatically on for all customers with the applicable solutions and is ready for immediate use.

Prerequisites and Limitations

The new information does not appear in requests, requisitions, or purchase orders visible to users or suppliers.
