SAP Ariba /\\

Feature at a Glance
Ability to synchronize fields between Workspace and Document

Keertan Rai, Sreejesh Srinivasan, SAP Ariba
Target GA: November, 2019

THE BEST RUN **SAP**

Feature at a Glance
Introducing: **Ability to synchronize fields between Workspace and Document**

Customer challenge

Current Sourcing & Contracts does not have infrastructure using which a pair of fields in a Workspace and its Document can be kept in sync.

Meet that challenge with
SAP Ariba

This feature enables the setting up of continuous, two-way synchronization of custom master data in workspaces or projects with custom master data fields in documents that are of the same type

For example, you could setup continuous sync between a field in Contract Workspace and a Savings Form Document in the workspace. Any change when saved in Savings Form will get reflected in the Contract Workspace and vice-versa. You can set up one-way sync or 2-way sync using this feature.

Experience key benefits

Provides a flexible way for customers to sync between a pair of desired fields in a Workspace and Document in the Workspace.

Solution area

SAP Ariba Sourcing
SAP Ariba Contracts
SAP Ariba Strategic Solutions Suite

Implementation information

To have this feature enabled, have your Designated Support Contact (DSC) submit a Commercial Request with your SAP Ariba Customer Engagement Executive or Account Manager. An SAP Ariba representative will follow up with information about SAP Ariba Services.

## Prerequisites and Restrictions

None

Feature at a Glance

Introducing: **Ability to synchronize fields between Workspace and Document**

- The fields to be synced must have the same name or labels in both the workspace and in the document.

- The fields in the project or workspace and the document must be of the same data type.

- The document whose fields are to be synced must belong to the parent project and not to any of its subprojects.

- Data synch will be triggered when the document is saved

- Syncing from a project or workspace to a document is not possible if the document is not yet created, or is already published.

Customer Support Admin

In this example, the field – 'Synchwithform' is a contract workspace field integrated to a corresponding field in the Form Document in the same workspace

Feature at a Glance

Introducing: **Ability to synchronize fields between Workspace and Document**

The value reflected in the Form document (17:30) is synchronized from the parent workspace

Feature at a Glance

Introducing: **Ability to synchronize fields between Workspace and Document**

Upon changing the value of the field to 17:35 in the Form document, the same is reflected is the corresponding field in the contract workspace
