Customer challenge

The data integrations tools that are available today with SAP Ariba Procurement solutions are not optimal for customers who want to seamlessly integrate external applications to search and get information about contract requests and contracts. Customers also require some manual effort to be able to update contract accumulators from external procurement solutions.

Meet that challenge with SAP Ariba

The Contract Compliance API set allows your client application to search and get information about contract requests and contracts created in SAP Ariba Procurement solutions. It also enables you to update the contract accumulators in SAP Ariba Procurement solutions with data from documents created in your client application.

Experience key benefits

This feature provides the ability for customers to fully automate and seamlessly integrate multiple external systems to SAP Ariba's contract compliance capabilities.

Solution area

SAP Ariba Buying
SAP Ariba Buying and Invoicing

Implementation information

This feature is automatically on for all customers with the applicable solutions but requires **customer configuration**.

Prerequisites and Restrictions

You must be registered with the SAP Ariba developer portal and have access to the applicable APIs.

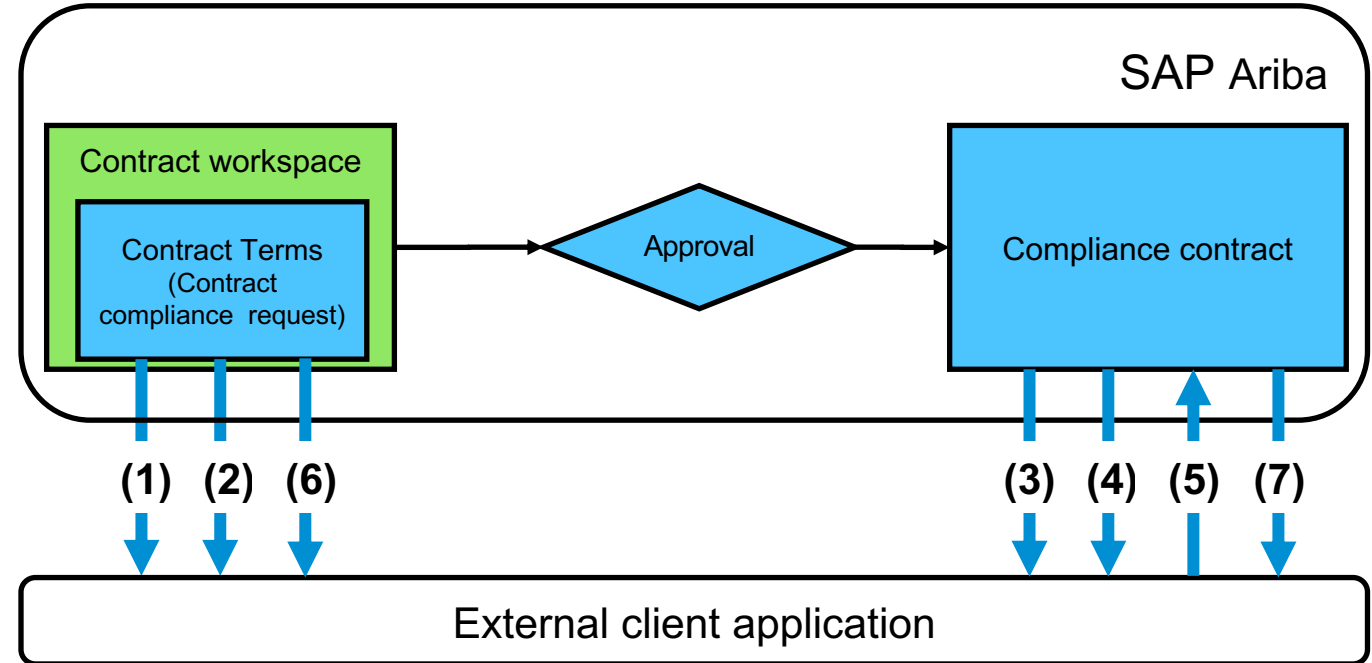

Configure the parameter to display the External Transaction Documents tab in the contract page (See release guide)

Feature at a Glance

Introducing: **Contract compliance API**

The Contract Compliance API set allows your client application to search and get information about contract requests and contracts created in SAP Ariba Procurement solutions. It also enables you to update the contract accumulators in SAP Ariba Procurement solutions with data from documents created in your client application. This set contains the following APIs:

1. **Contract request export API:** exports contract request header details to the client application.
2. **Contract request line item export API:** exports specified contract request line items to the client application.
3. **Contract export API:** exports contract header details to the client application.
4. **Contract line item export API:** exports specified contract line items to the client application.
5. **Contract accumulation requests API:** Updates and validates contract accumulators based on the documents from the client application
6. **Contract request search API:** Searches for contract requests based on search parameters and exports the results to the client application.
7. **Contract search API:** Searches for contracts based on search parameters and exports the results to the client application.

Feature at a Glance

Introducing: Contract compliance API

You can configure the *Application.Contract.MasterAgreement.AllowExternalDocumentsTabView* parameter to display the **External Transaction Documents** tab in the contract page. The transactions displayed on that screen are those sent across to update the contract accumulators, thereby enabling tracking of the audit history of the transactions issued against the contract.

C316-V2 - (CW2230390) Maintenance contract v4

Status: **Open**

These are the details of the request you selected. Depending on its status, you can edit, change, copy, cancel, or submit the request for approval. You may also print the details of the request. Review your request and take the desired action(s).
