Feature at a Glance

Validation of SAML assertions configured on inbound transaction documents in Test Central

Satheesh Gannamraju SAP Ariba
Target GA: August 2020

THE BEST RUN **SAP**

Feature at a Glance

Introducing: **Validation of SAML assertions configured on inbound transaction documents in Test Central**

Customer challenge

CIG Test Central on sell-side supports "Custom Validation" when assertions are configured on inbound documents, intended to allow TC to mimic some a buyer's ERP validations, but if a test document violates any of these assertion validations current Test central will NOT show up in the test scenario step's pass/fail indicator. In fact, if the message violates one of the custom validations, it will cause that test scenario step to be forever stuck in "in progress" status

Meet that challenge with
SAP Ariba

Allow suppliers to view assertions validation errors within a **Project Self Test Result** page for inbound documents from suppliers to CIG. Supports validating the parent related assertion separately, provide re-run button for inbound documents that have indicator "fail", offer 're-run' option when test cases within scenario fails, provide Fail icon for Test document.

Experience key benefits

This feature clearly show the status of (Pass/Failed/In Progress) and allow suppliers to re-run a test scenario whenever a test case fails, where a new parent document is re-generated and ready to receive new inbound document. Any failed scenario will also display the full list of assertion as a pop-up detail information.

Solution area

SAP Ariba Network
SAP Ariba Cloud Integration Gateway

Implementation information

This feature is **automatically on** for all customers with the applicable solutions

Prerequisites and Restrictions

Prerequisite: Please check the online documentation.

Restrictions: None.
