# Feature at a Glance

## Introducing: Support for S/4HANA Extensibility Framework to enable custom field mappings

Ease of implementation  High touch

Geographic relevance  Global

### Customer challenge

In S/4 HANA cloud or S/4 HANA on-premise (without CIG Addon) integration, extension framework (custom fields) is not supported via CIG.

### Meet that challenge with SAP Ariba

In S/4 HANA CE (Cloud Edition) or S/4 HANA on-premise (without CIG Addon), customer can create custom fields. Whenever a custom field is created, the S/4 HANA WSDL gets updated and a new field is added in the WSDL. This WSDL is imported into CIG so customer can map the custom field accordingly using mapping tool.

### Experience key benefits

Customer can have customization/extensions using mapping tool for the customized fields that has been introduced in S/4 HANA CE or S/4 HANA on-premise (without CIG Addon).

### Solution area

SAP S/4HANA Cloud Edition  
SAP S/4 HANA On-premise (w/o CIG Add-on)  
SAP Ariba Network  
SAP Ariba Cloud Integration Gateway  
SAP Ariba Quote Automation  
SAP Ariba Contracts  
SAP Ariba Sourcing

### Implementation information

To have this feature enabled, please have your Designated Support Contact (DSC) submit a **Service Request (SR)**.

### Prerequisites and Restrictions

For Prerequisite please check the online documentation.
