Feature at a Glance

Integration support for sending ERP-initiated ERS invoices from SAP S/4HANA Cloud in the 42K integration scenario

Target GA: February, 2022

THE BEST RUN SAP

Feature at a Glance

Integration support for sending ERP-initiated ERS invoices from SAP S/4HANA Cloud in the 42K integration scenario

Customer challenge

SAP Ariba Cloud Integration Gateway did not support ERP initiated ERS invoices for 42K Commerce Automation scenario.

Solution area

SAP Ariba Cloud Integration Gateway, for:
Ariba Network
SAP Ariba Buying
SAP Ariba Buying & Invoicing

Meet that challenge with
SAP Ariba

With the SAP Ariba 2202 release, buyers can create ERP-initiated ERS (Evaluated Receipt Settlement) invoices on SAP S/4HANA Cloud and send it to Ariba Network through SAP Ariba Cloud Integration Gateway.

When a buyer creates an ERS invoice on SAP S/4HANA Cloud for the supplier that is not registered on Ariba Network, quick enablement allows the buyer to create new Ariba Network accounts on behalf of that supplier. They can create these accounts by specifying the supplier's company information with an email address (mandatory) in the **Correspondent** element. Ariba Network uses this information to create the supplier's account. It supports the quick enablement of suppliers on Ariba Network by providing the required supplier information and email address in the ERS invoice.

Implementation information

This feature is **automatically on** for all customers with the applicable solutions and is ready for immediate use.

Experience key benefits

Buyers can settle goods receipts without receiving invoices from suppliers which helps to reduce invoice variances and close purchasing transactions quickly.

Prerequisites and Restrictions

Prerequisite and Restrictions apply. Please check the What's New in SAP Ariba guide for details.
