## Introducing: Supplier risk in guided buying

Ease of implementation  High-Touch  
Geographic relevance  Global

### Customer challenge

A guided buying user currently has no visibility of risk indicators when selecting items or forms for their purchases, or the risk status associated with suppliers that they interact with in guided buying.

Customers need a simple means to achieve categories to direct users to follow a risk engagement project before they purchase in the guided buying process.

### Meet that challenge with SAP Ariba

Guided buying users can now mitigate risk when purchasing non-catalog purchases or requesting a quote for an item.

A risk exposure graphic shows the level of risk associated to each supplier, which displays as a low, medium, or high risk exposure level.

Aid users in mitigating risk further by configuring policies, which can trigger warning messages or invoke further steps if the risk level for the supplier is too great.

### Experience key benefits

Purchasers can avoid purchasing from suppliers that have been identified as high risk.

Additional risk can be mitigated by warning or preventing purchasing while making purchases from high risk suppliers.

Purchasers can gain insights into the risk levels associated with their suppliers.

### Solution area

SAP Ariba Buying with Guided Buying  
SAP Ariba Buying and Invoicing with Guided Buying  
SAP Ariba Supplier Lifecycle and Performance  
SAP Ariba Supplier Risk

### Implementation information

This feature is automatically on for all customers with the applicable solutions but requires **customer configuration**.

### Prerequisites and Restrictions

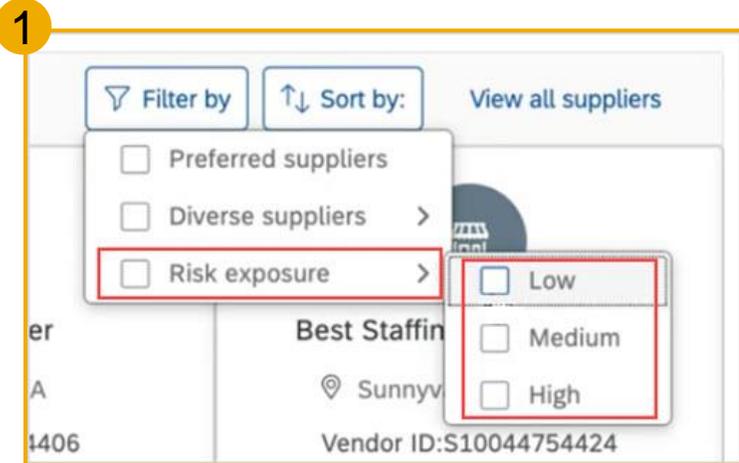

- Your SAP Ariba Buying solution must be integrated with SAP Ariba Supplier Lifecycle and Performance and SAP Ariba Supplier Risk.
- Enable the guided buying parameters:
  - PARAM\_ENABLE\_SUPPLIER\_RISK
  - PARAM\_ENABLE\_SUPPLIER\_DIVERSITY\_NON\_CATALOG\_FLOW
- ENABLE\_SUPPLIER\_CAROUSEL\_ON\_SEARCH should be enabled to display suppliers in search results

### Risk Fields in Policies

Policies can be configured by Administrators in guided buying to help users mitigate risk by displaying messages, request justification, or prevent the transaction from proceeding when a certain risk score is associated with a supplier selected on a transaction.

The amount of risk is based on the overall risk score; for example, you can configure a validation policy to error and prevent users from using suppliers with a **risk score** of **3**. You can also add warnings that invoke additional approval steps.

There are two risk fields used in validation policies:

- **LineItems.Supplier.Risk.Exposure.ScoreLevel**
- **LineItems.Supplier.Risk.Exposure.NameofCategory.ScoreLevel**

There are two risk fields used in supplier and touch policies:

- **Suppliers.Risk.Exposure.ScoreLevel**
- **Suppliers.Risk.Exposure.NameofCategory.ScoreLevel**

**NameofCategory:** Values for this field are EnvironmentalAndSocial, Financial, LegalAndRegulatory, and Operational.

**ScoreLevel:** Values for this field are: 4= Unknown, 3= High, 2= Medium, 1= Low.

The supported operators for the fields are == (is equal to) and != (is not equal to).
