

# Feature at a Glance

## Additional Custom Fields for Supplier Risk Data (ARI-16778)

Target GA: November 2022

# Additional custom fields for supplier risk data

## Description

- Risk exposure configuration has been enhanced to allow 300 custom fields across all risk categories.
- The custom fields can contribute to the risk exposure, or they can be displayed as information only without contributing to the risk exposure.
- A new **Custom data** tab on the **Risk** page of the supplier's Risk profile shows the custom fields for each risk category.

## Customer benefit

- Increased number of custom fields allows you to bring in a variety of data across risk categories for monitoring suppliers, thus enriching your capability to determine risk exposure.

## User

- Buyer

## Enablement model

- Automatically On

## Applicable solutions:

- SAP Ariba Supplier Risk

# Prerequisites, Restrictions, Cautions

## Prerequisites

- You must be a member of the **Supplier Risk Manager** group to create custom fields and configure risk exposure.
- Best practice is to create a new draft version in the configuration editor, create your custom fields, and activate the draft version before executing your API updates.

## Restrictions

- Custom fields cannot be used for adverse media or attachments.
- When configuring custom fields in the user interface or populating custom fields with values in the API or CSV upload, never include personally identifiable information (PII).

## Cautions

- The custom fields and values can be added to the supplier 360° profile and the risk exposure using the Risk Category Information API for Supplier Risk Exposure or the existing CSV upload process. The CSV includes the suppliers and data elements that you defined in the configuration settings.
- The manual CSV upload process identifies each supplier by ERP Vendor ID and source system. When you use the Risk Category Information API, you must use the SM Vendor ID instead.
- All fields must be mapped in the configuration editor to be included in the risk exposure calculation for the supplier. Any eligible field with missing configuration is ignored and does not contribute to the risk exposure.

# Feature details

This feature expands the existing custom field functionality in several ways:

- Number of available custom fields increases to 300.
- Field metadata now includes **URL**, **Notes**, and **Source** as optional additional information.
- Custom fields can now be information only and omitted from contributing to risk exposure.
- New **Custom data** tab shows the risk exposure for all contributing factors, including the new custom fields, by risk category.

The screenshot displays the SAP Risk Management interface. The top navigation bar includes tabs for Risk exposure, Risk incidents, Enriched corporate info, Financial risk, Engagement requests, and Custom data (highlighted with a red box). Below the navigation bar, there is a table with columns for Risk category and Risk exposure. The table shows three categories: Regulatory & legal (5), Operational (5), and Financial (5), all with a risk exposure of Low. Below this table is a detailed view of the Custom data tab, which includes a table with columns for Name, Value, Update date, URL, Notes, Source, and Contributing. The table lists five custom fields (field 1 to field 5) with their respective values (5, 50, 25, 5, 15) and update dates (2022-08-06). Below the table is a line chart showing the risk exposure over time from March 13 to June 05. The chart shows a sharp increase in risk exposure starting around May 22, reaching a peak of 60 on June 05. Below the chart are four panels, each representing a risk category: Regulatory & legal (25%), Environmental & social (25%), Operational (25%), and Financial (25%). Each panel shows a risk exposure of Low and a list of contributing factors, including custom fields (field 15, 14, 13, 12, 10, 9, 8, 7, 5, 15, 4, 3, 2, 50).
