SAP Business Network – Widgets Information to Keep in Mind
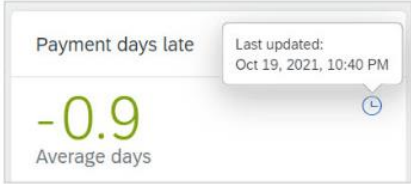

Frequently asked Questions

How are Non - USD amounts converted

Purchase Orders and Invoice amounts specified in non-USD currencies are converted for the purpose of aggregation using the currency exchange rate at the time the transaction document is created

The aggregated amount is further converted to you use-specified currency for display in Widgets.

This is why you may see a difference between the original amounts displayed in the workbench and the aggregated amount displayed in the widgets

Can I remove widgets for specific user?

To some extent, some Widgets can be removed from the view of a specified user. When creating a role, remove the permissions associated with a particular widget, however removing permissions may impact on the ability of the user to access parts of the SAP Business Network they need to complete their tasks.

Where users are using a generic login removing Widgets from the Home Page will affect all users.

Can I access the Benchmarking Widgets using a Standard Account

No, all Benchmarking Widgets require suppliers to have an Enterprise Account with a minimum Bronze-level Subscription.

Note that some information may not be displayed depending on your Customer/Buyer

Refer to the Benchmarking Widgets Part 1 & 2 - **Click Me**

When does the information on the widget get updated?

Where there is a 🕒 click on it to see when the information was last updated

Invoices paid late calculation Table

	-60	Invoices paid 31-60 days earlier than the scheduled date
	-90	Invoices paid 61 or more days earlier than the scheduled date

Definition

Keep in Mind

❖ Some widgets use the remittance data or scheduled data uploaded by buyers, but not all customers/buyers load such data into the network

❖ The KPI framework includes intelligence to identify and exclude data outliers that may contain bad data or test data that could interfere with the KPI calculation

❖ KPI calculations may *NOT* fully reconcile with the information in the network
