THE BEST RUN SAP

Agenda

- Introduction to Seller Integration Suite Managed Gateway

- Advantages of Integration Suite Managed Gateway over legacy integration methods for suppliers

- UI navigation of Integration Suite Managed Gateway screen

- Enabling and disabling Integration Suite Managed Gateway on Business Network supplier accounts

- Requirements for connecting to/from Integration Suite Managed Gateway with supplier's external system

***SAP Integration Suite, managed gateway for spend management and SAP Business Network formerly known as Cloud Integration Gateway (CIG)

Introduction to Seller Integration Suite Managed Gateway

The SAP Ariba Cloud Integration Gateway is a self-service gateway that allows suppliers to configure and integrate to Ariba Network and transact with buyers seamlessly.
Using the SAP Ariba Cloud Integration Gateway, you can:

- Configure your integration between SAP Business Network and your ERP application or external system to manage one or more buyer supplier trading relationships.
- Specify the mapping configuration
- Validate and self test transaction documents.
- Monitor and track the integration lifecycle overall.

Advantages of Integration Suite Managed Gateway over legacy integration methods for suppliers

- It's free portal for everyone.

- It's a self service portal and requires no additional team/resources to set it up.

- It supports almost all document types now.

- It can help you transform the file from one format to another seamlessly.

- It provides online help for the tasks associated with each page.

To view help information for a page, click the Help button on the top left of the page. Instructions, tips, and notes are displayed in a text pane to the right of the page. You can also enter text in the search field inside the pane to initiate a search within the help text.
