Other Information: Unloading Point; Storage Location; Recipient; Purchase Requisition/Item; Requester; Final Recipient; External Line Number; Manufacturer Part ID

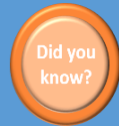

Example Material Line Details

Some Buyer will add comments to line items, it is important to check by clicking on either on Details for a specific line item or Show Item Details to open all line items

The level of information is determined by a Buyer's Transaction Rules, however Control Key information overrides Transaction Rules.

Contact the Buyer when information contained within Details may be different to previous processes or requirements. This includes where a PO is Evaluated Receipt Settlement (ERS), and your business does not usually participate in this process.

Show Items Details will open all line items on the PO including parent and child lines. Using Details opens the line item of the item selected.

Line-Item Details provides suppliers with information that the Buyer has added, it may include comments about specific line items such as, deliver goods only on pallets or roll-cages packed no higher than 4 cartons high.

Both Material and Service Pos have Details at Line-Item Level.
