January, 2017

SAP Ariba 

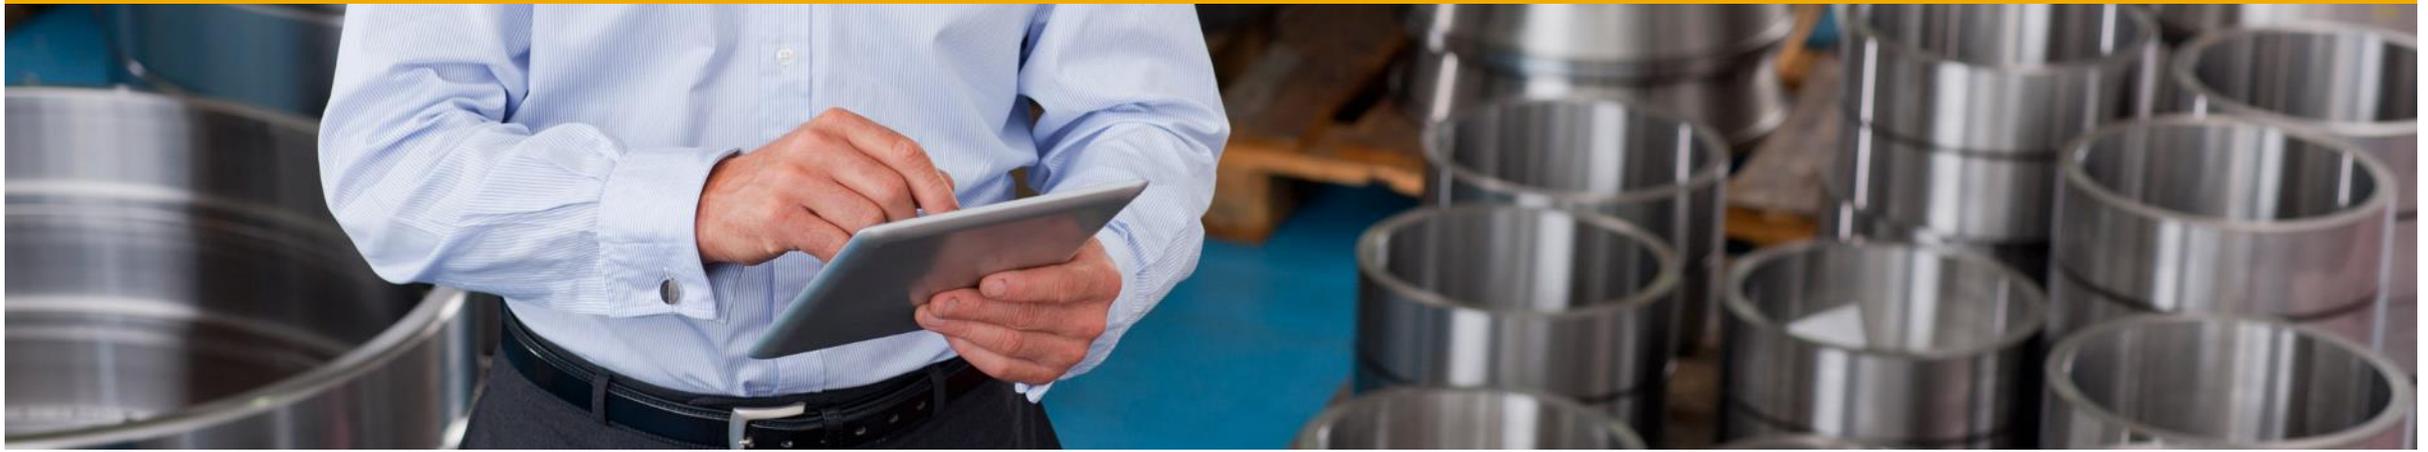

Internal

Agenda

- CSV Invoice overview
- CSV Invoices scope
- Data Requirements
- CSV fields mapping
- CSV template use
 - Downloading CSV template
 - Uploading CSV Invoice
 - Tracking Invoice status
- Troubleshooting CSV Invoices
- CSV template Change log
- Contacts and Support

CSV Invoice Overview

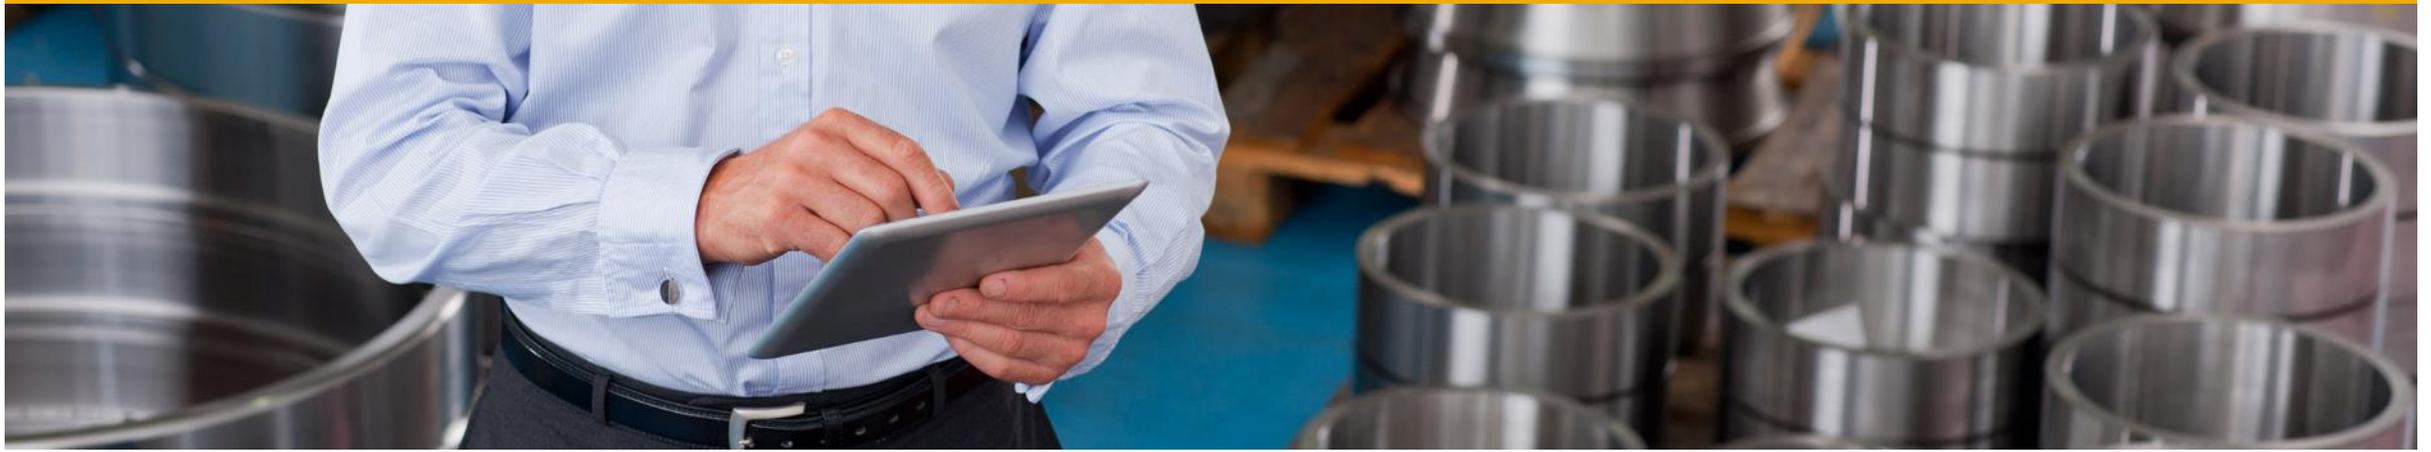

SAP Ariba 

CSV Invoice Overview

- **CSV stands for Comma Separated Value/Variable file.**
It represents structured way of data stored as plain text file.
- **CSV Invoice Upload**
Supports the transfer, transformation and loading of comma delimited files (CSV) representing a Supplier's invoices to be rendered as cXML invoices for their Customers.

Provides an effective means for Suppliers with a large number of invoices to submit these to their Ariba customers electronically when they do not have the immediate means to provide these via cXML or EDI directly.

CSV Invoice Scope

SAP Ariba 

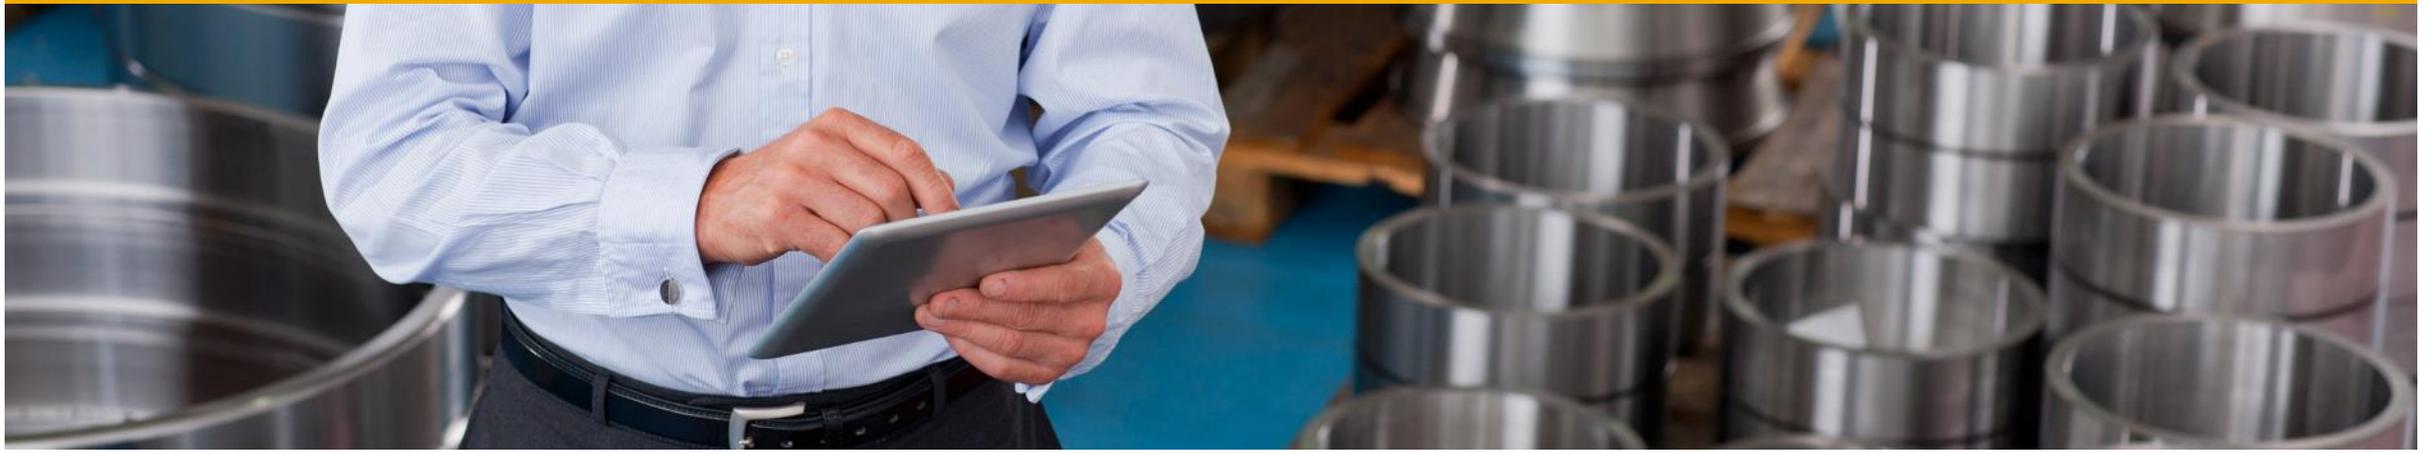

CSV Invoice Scope

Woolworths supports the following CSV invoice types:

- **PO Invoices:** invoices against purchase orders where the purchase order was received through the Ariba Network.
- **Contract Invoices:** Invoices against a contract or master agreement

Invoices submitted through CSV upload have the following requirements:

- Cannot be greater than 10,000 lines in total
- Cannot be greater than 25000 invoices per file
- One invoice can have maximum of 5000 line items.
- File cannot exceed 40MB in size.

Data requirements

SAP Ariba 

 SAP[®]

Invoice Data Requirements

- Invoice ID must be always present. Should not exceed 16 Characters.
- InvoiceDate format must be: mm/dd/yyyy.
- PO based invoices MUST use the orderID field to capture the PO number.
- Contract Invoices MUST use the contractNumber field to capture contract number.
- Purpose must be either 'standard' or 'lineItemCreditMemo' only.
- 'originalInvoiceNumberReference' is mandatory for lineItemCreditMemo.
- The contact roles available in the CSV template are:- billTo, soldTo, remitTo, from, shipTo and shipFrom.
- billToName and RemitToName are mandatory.

Additional Data Requirements

Required fields:

- comments (Mandatory in case of credit memo)
- supplierVatID
- lineItemSubtotal
- invoiceTaxAmount (default to '0' if tax does not apply - must be on first line if multiple lines for same invoice are present)
- invoiceTaxCategory (e.g : gst - must be on first line if multiple lines for same invoice are present)
- invoiceTaxPercentageRate (must be on first line if multiple lines for same invoice are present)
- invoiceExemptDetail (content must be "exempt" or "zeroRated" if 0% tax)
- invoiceTaxableAmount (must be on first line if multiple lines for same invoice are present)
- invoiceTaxDescription (must be on first line if multiple lines for same invoice are present)

Additional Data Requirements

Optional fields:

- supplierPartID
- costCenter
- GLAccount
- lineTaxAmount
- lineTaxCategory (e.g : gst)
- lineTaxPercentageRate
- exemptDetail (content must be "exempt" or "zeroRated" if 0% tax)
- lineTaxableAmount
- lineTaxDescription
- linecomments (should not exceed 50 characters)
- serviceOrderNo
- summarySpecialHandlingAmount (must be on first line if multiple lines for same invoice are present)
- summarySpecialHandlingDescription (must be on first line if multiple lines for same invoice are present)
- summaryShippingAmount (must be on first line if multiple lines for same invoice are present)
- summaryDiscountAmount (must be on first line if multiple lines for same invoice are present)

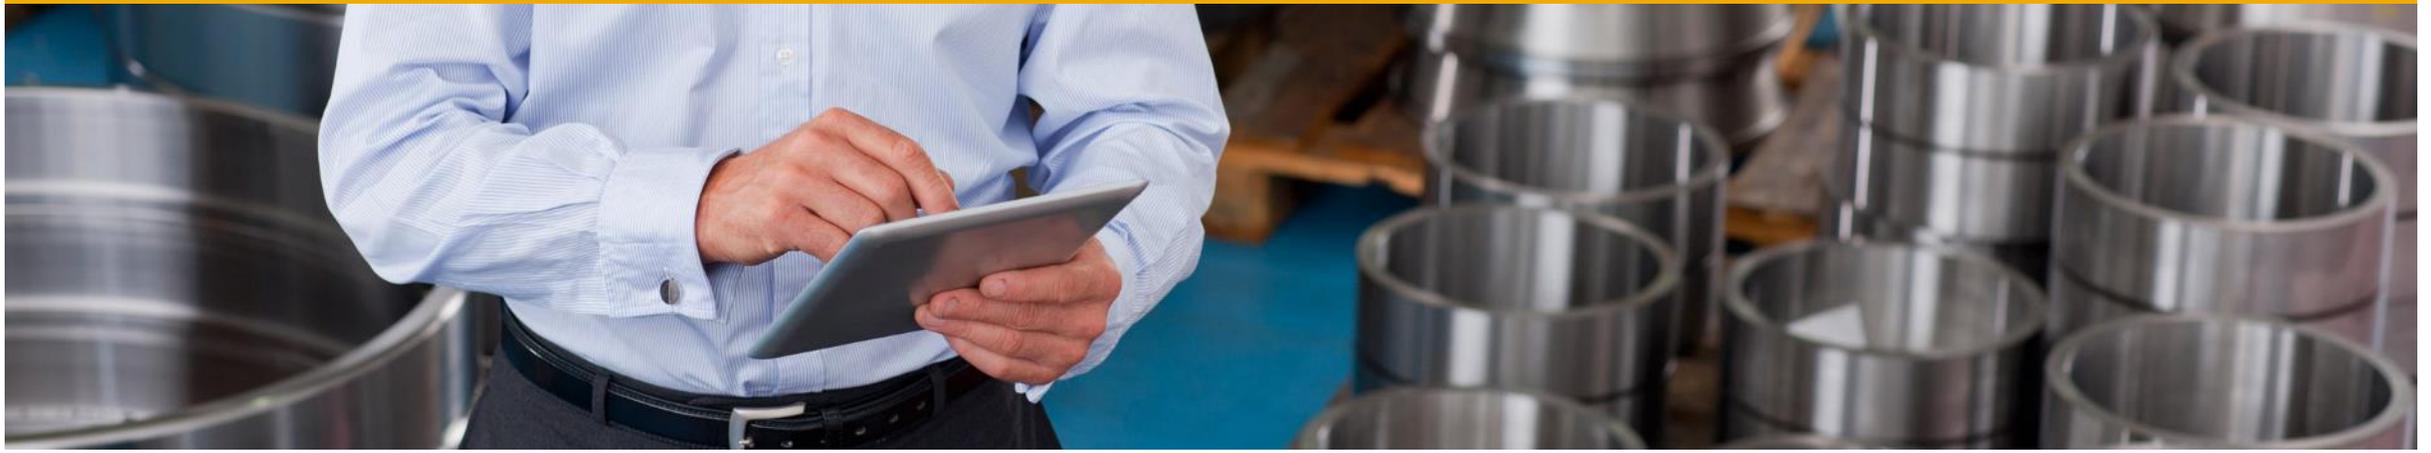

CSV File Recommendations

File Requirements

- Alterations or updates to the original CSV file format downloaded from the Network will cause the CSV to fail during the upload process.
- You must keep the CSV file you download in its native format.
- Do not convert to an Excel file, save as a workbook, add macros, delete/add columns or edit the column names in any way.

The application Ron's editor is an example of a CSV File editor.

- You can download a free trial at:
http://www.ronsplace.eu/Products/RonsEditor?utm_source=killink
- Note that this is not an Ariba software and is not supported by Ariba.

CSV template details

SAP Ariba 

CSV Sample / Field Mapping

- The embedded CSV sample template provides:
Data sample of valid CSV invoices processed successfully by the Customer.

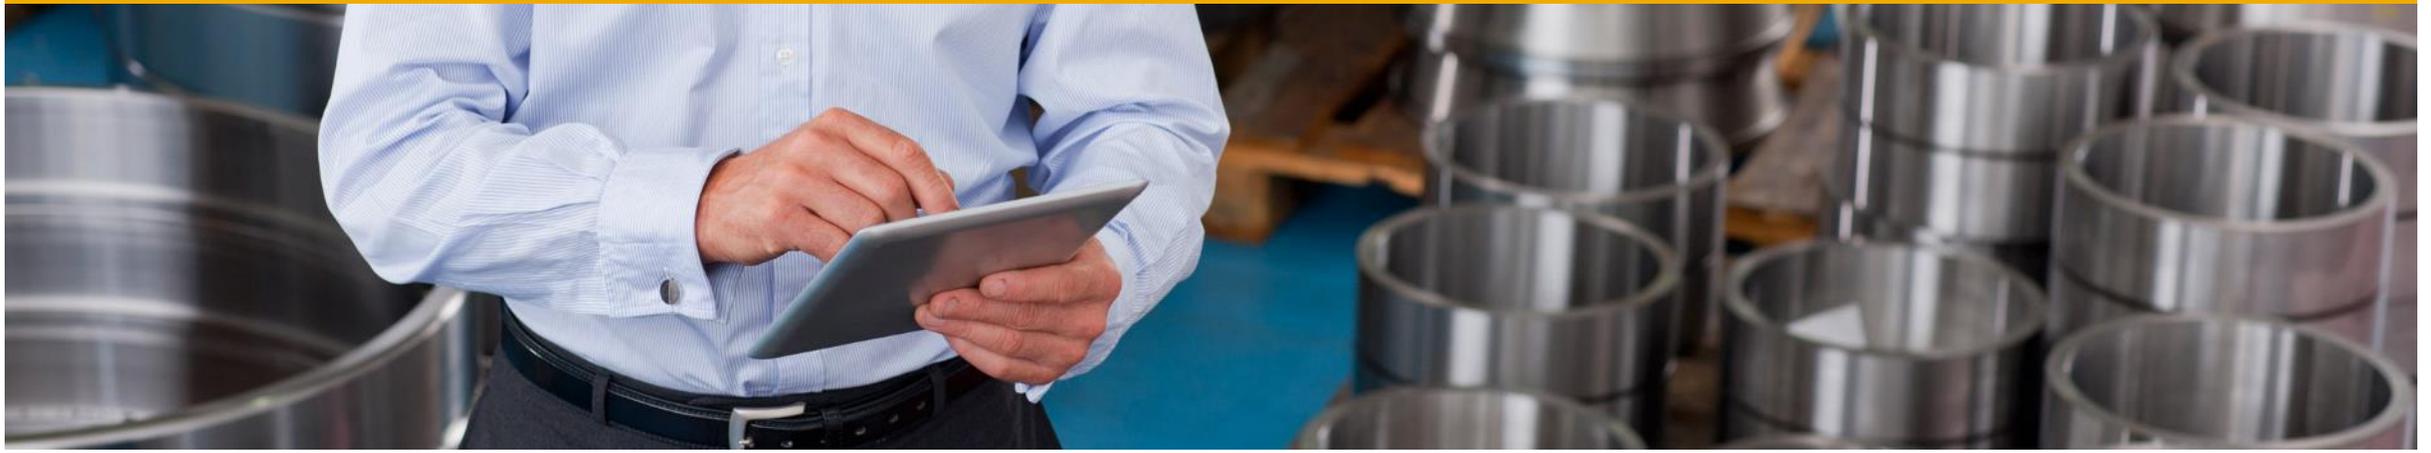

Woolworths_CSV
InvoiceTemplate

- The embedded field overview provides:
Mapping information on field content and requirements.

Woolworths_field
Description

CSV template use

SAP Ariba 

Downloading the CSV Template

- From the Home Page of your production AN account, Click the **Company Settings** tab.
- Click **Customer Relationships**.
- AN will display a list of all customers that you have a relationship with on the Ariba Network.
- Click on Woolworths link within your list.

Current

	Customer		Approved Date ↓	Routing Type	
<input type="checkbox"/>	Woolworths Ltd - TEST	Supplier Information Portal	18 Jan 2016	Default	Actions ▼
↳	Reject				

Downloading the CSV Template (continued)

- Click the **Download CSV Invoice Template** button. You will be prompted to Open or Save the file.
- Save the file to your local hard drive.
- Once you are finished saving the template file, click the **Done** button to exit this section.
- You will be back at your **Customer Relationship** page.

CSV Invoice Fields

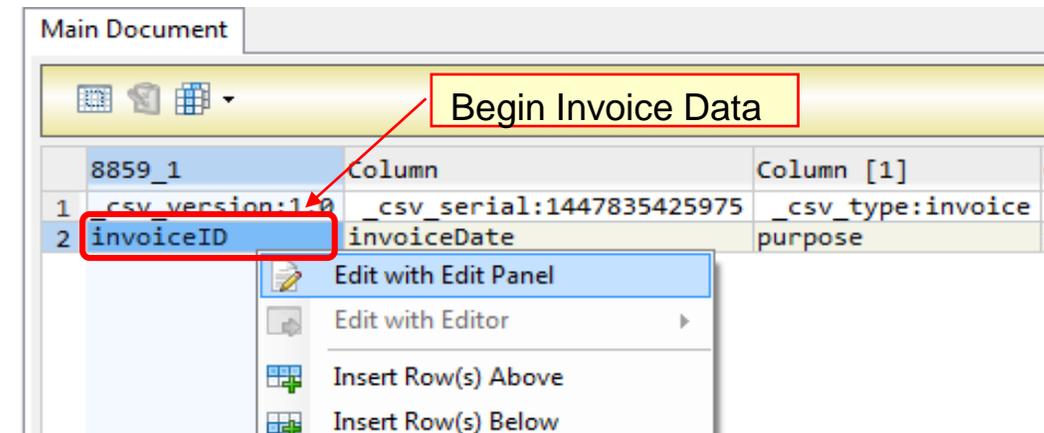

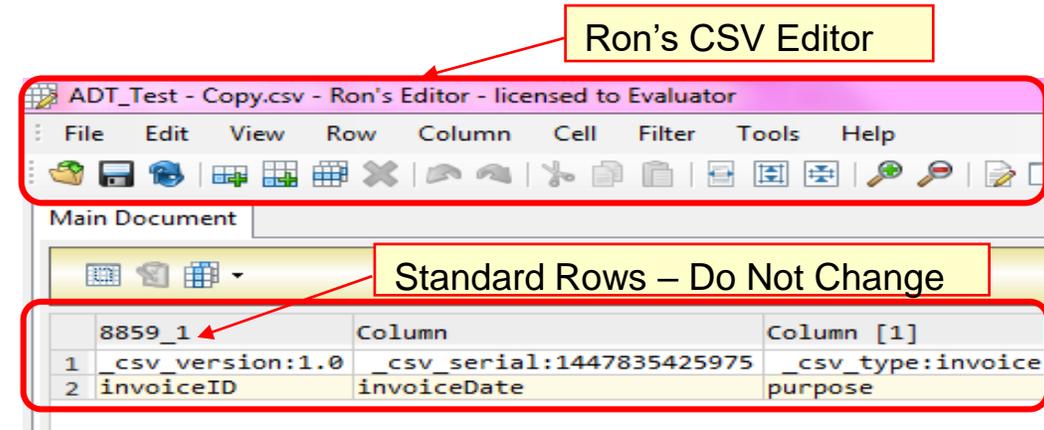

Page 1  

Name	Description
invoiceDate	Date of the invoice (Required) INPUT FORMAT: mm/dd/yyyy
orderID	Reference to the order being invoiced (Required for PO Invoice)
orderDate	Date of order being invoiced (Required for PO based Invoice) INPUT FORMAT: mm/dd/yyyy
agreementID	Invoice against Contract (Required for contract-based invoicing or NON-PO Invoice)
purpose	Type of invoice to determine if invoice is standard or credit. Enter 'standard' or 'lineLevelCreditMemo' only (Required)
originalInvoiceNumberReference	Original Invoice Number (Required for lineLevelCreditMemo)
isTaxInLine	Enter 'Y' if there is Tax details in the Line level. Else enter 'N' (Y- indicates YES and N indicates NO)(Required)
billToAddressID	Bill To Address ID
billToName	Bill To Name

 [Download CSV Invoice Template](#)   [Done](#)

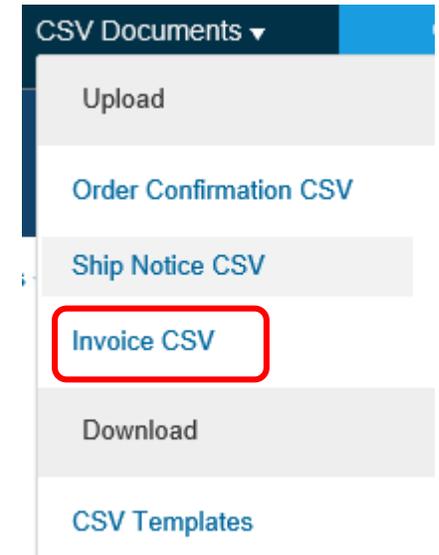

Auto-populate the CSV Invoice Template

- Populate each available invoice field as appropriate – starting in **Row 3, Cell A**
- Note that . Rows 1 and 2 are CSV File information rows and cannot be removed or modified in any way. If these fields are changed or removed, the file will fail at upload.
- This data should be extracted from a suppliers application and automatically populate the CSV.
- Populating the fields manually is possible, but not the recommended approach.
- To populate value for each field select that cell, right click and chose option 'Edit with Edit Panel.
- When you have completed populating all fields for your particular invoice, **Save** the file to your local drive.

Upload the CSV Invoice

- From the Home Page, locate the **CSV Documents** link on the right side of the page.
- Click **Invoice CSV**.
- You will see an **Import CSV Invoice** box.
- Ensure **Customer** is selected in the **Customer** drop-down box.
- **Note:** Each customer using the CSV Invoice method has a customized template. You cannot use any other customer's template for Customer .
- Click the **Browse** button and find the CSV File you have created and saved.
- Once the file path is shown, click **the Import CSV Invoice** button.

Tracking CSV Invoice status

Checking Invoice Status

- From your Home Page, click on the **Outbox** tab.
- You will again, see a listing of all of the invoices you have sent.
- Each invoice number is a link to open and view that invoice.
- There are two **status** types provided:
 - Routing Status: show the routing status of the invoice through the Ariba network to Woolworths.
 - Invoice Status: shows the status of the invoice itself specifically through it's payment process.

Invoices

Invoice #	Customer	Reference	Submit Method	Origin	Source Doc	Contractor	Start Date	End Date	Date ↓	Amount	Routing Status	Invoice Status
CSV_3700026415	Woolworths Ltd - TEST	3700026415	CSV Upload						6 Jul 2016	\$3,300.00 AUD	Acknowledged	Sent

Tracking CSV Invoice status

Routing Status

- **Obsoleted:** You canceled the invoice.
- **Failed:** The invoice failed the Woolworths invoicing rules as set within their Ariba Network account.
- **Queued:** Ariba Network received the invoice from a suppliers Network account, but has not sent it to the Woolworths network account.
- **Sent:** Ariba Network sent the invoice to Woolworths Ariba Network account. The invoice is awaiting download into the Woolworths invoicing application.
- **Acknowledged:** The invoice has been sent from the Woolworths network account into their invoicing application.

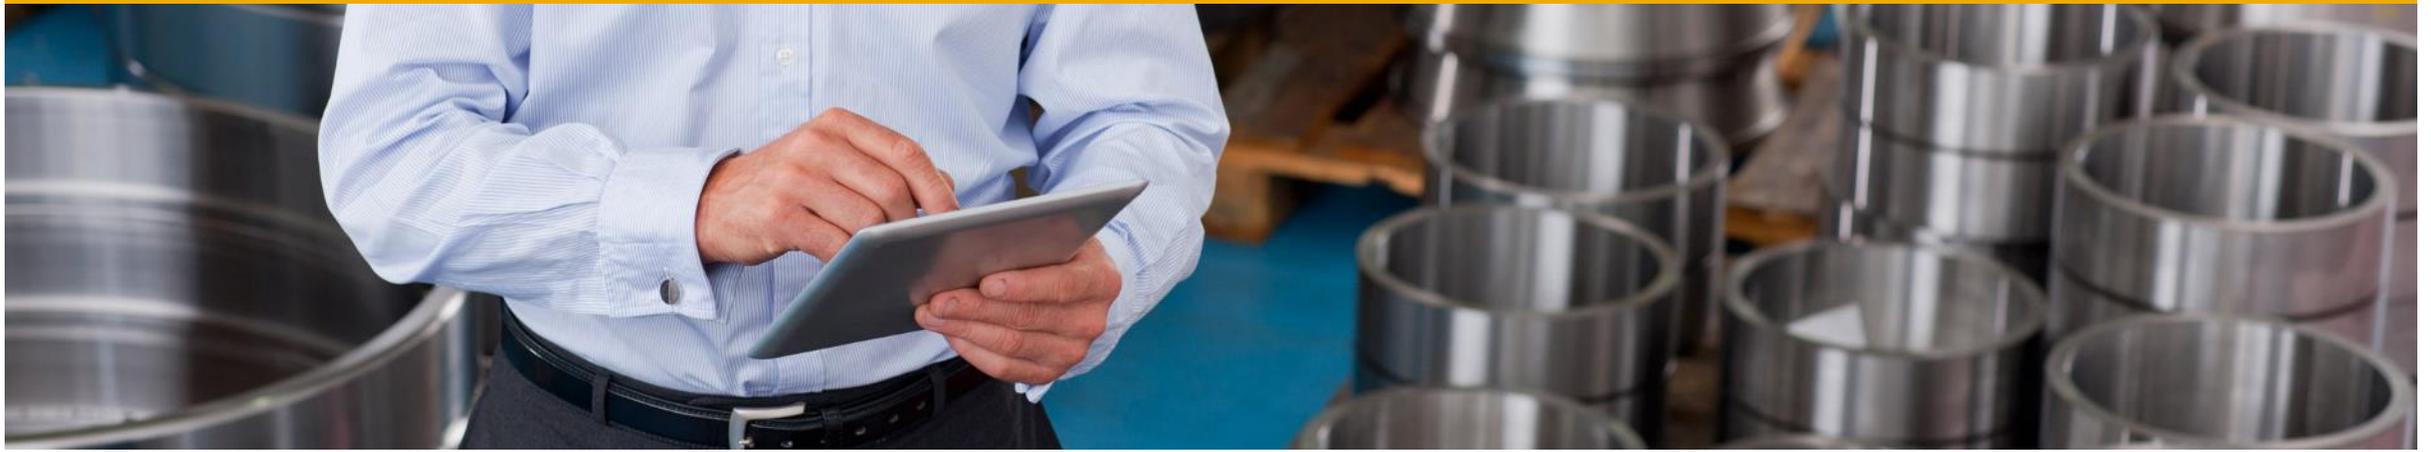

Invoice #	Customer	Reference	Submit Method	Origin	Source Doc	Contractor	Start Date	End Date	Date ↓	Amount	Routing Status	Invoice Status
CSV_3700026415	Woolworths Ltd - TEST	3700026415	CSV Upload						6 Jul 2016	\$3,300.00 AUD	Acknowledged	Sent

Tracking CSV Invoice status

Invoice Status

- **Sent** : Woolworths has received the invoice.
- **Rejected**: Woolworths has rejected the invoice. If Woolworths subsequently accepts the invoice or approves it for payment, invoice status updated to Sent indicating invoice was accepted .
- **Failed**: Ariba Network experienced a problem routing the invoice.
- **Approved**: Woolworths has approved the invoice for payment.

Invoice #	Customer	Reference	Submit Method	Origin	Source Doc	Contractor	Start Date	End Date	Date ↓	Amount	Routing Status	Invoice Status
CSV_3700026415	Woolworths Ltd - TEST	3700026415	CSV Upload						6 Jul 2016	\$3,300.00 AUD	Acknowledged	Sent

Troubleshooting CSV Invoices

SAP Ariba 

 SAP[®]

Troubleshooting CSV Invoices

General Checks

- As noted earlier, the CSV template was designed to be automatically populated by a script in which the data is extracted from your billing system into the template.
- IF the template is being populated manually (not recommended, but possible) be sure that the application that is being used to create the file is a true CSV editing application.
- Be sure that all value fields such as unit price, tax, subtotal, gross, etc., are entered properly, (for example 2.25 or .58).
- Ensure that the file does not contain any special characters, (dollar sign, asterisk, quotation marks, etc.).
- Ensure that none of the file data within the first three rows of the template sample has been modified from its original state.
- Ensure you are using the correct version of the CSV template for Woolworths.
- **IMP** - Once the invoices are uploaded using the CSV channel , Supplier will see the message saying –‘ csv file uploaded successfully’ but may not immediately see the invoice on the Network GUI .This is because the server may take sometime to update the UI screen . In case the Supplier need to refer the invoice immediately but doesn't find it on the UI , they may use the invoice search option to find the uploaded CSV invoice. The server will process the request and fetch the invoice from the Database.

Troubleshooting CSV Invoices

- **When is the problem occurring?**

1. Is it at the point of uploading the file?
2. Is it after the file is uploaded and invoices show a failed status?
3. Is it after the file is uploaded and invoices show a rejected status?

- **If the problem happens at #1**

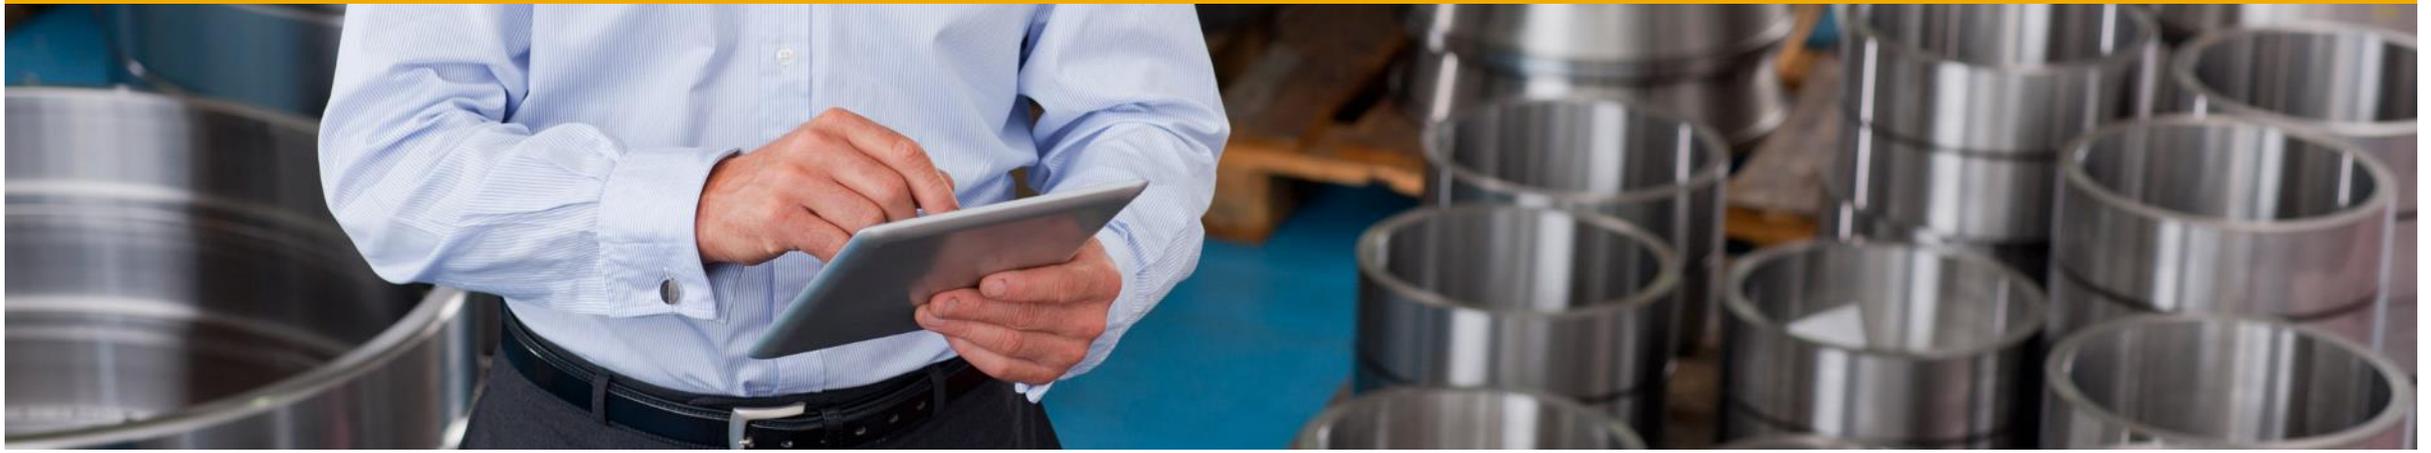

- ♦ The file itself does not meet the basic CSV requirements. You will see specific error messaging on the screen to help identify which field needs to be reviewed/changed. This could be:
 - Missing header information or missing data in a required field
 - Incorrect formatting in any field
 - **The problem within the file must be corrected and the entire file must be uploaded again – nothing was loaded from the CSV file.**

- **If the error happens at #2**

- ♦ The invoices (as opposed to the file) failed the invoice rule validation. When the invoices are converted from the .csv file to actual individual invoice documents on the AN, they are then validated based on the Invoice Rules set in Customer Ariba Network account.
 - Check the 'History' tab on the individual invoice to see which rule was violated and caused the invoice to fail.
 - **The problem within the file must be corrected BUT only those invoices that failed need to be resent.**

- **If the error happens at #3**

- ♦ The invoices passed .csv validation and Ariba Network validation but were rejected by Customer (either by their invoicing system automatically or by an end user manually).
 - Check the History tab on the individual invoice for additional details.
 - **The problem with the individual invoices must be corrected and only those invoices that were rejected need to be resent. Invoice numbers must be modified.**

CSV template Change log

SAP Ariba 

Moving from one version to another

Important notice:

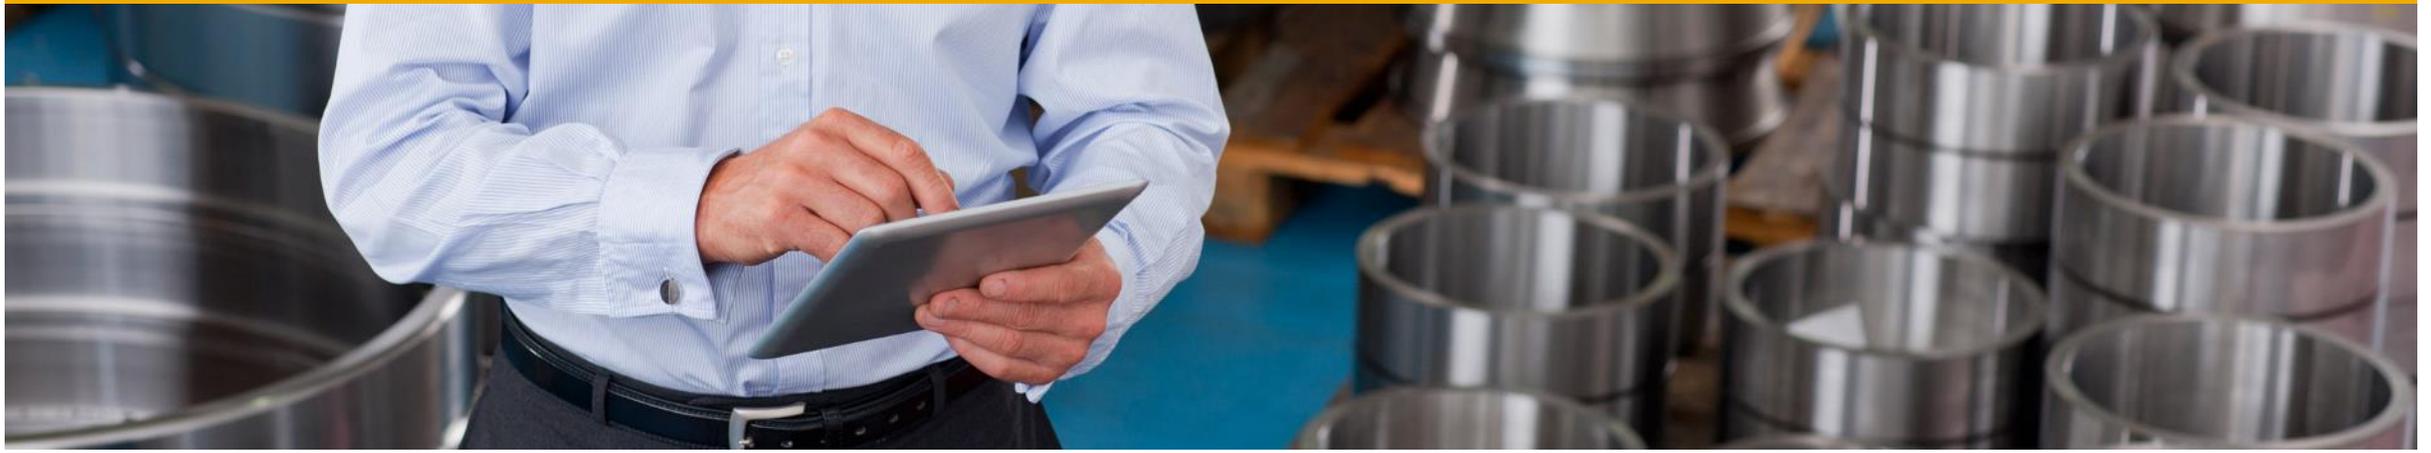

Whenever new version of csv template is released or mapping rules are modified there is new unique template serial number generated by Ariba Network. This number is part of the template and being sent back with upload (sample: `_csv_serial:1423025640524`).

If csv template header's are not changed it is still possible to use the old version of the template however supplier is notified every time outdated version is used.

⚠ WARNING: The uploaded CSV uses a deprecated format. Please upgrade to the latest version (`_csv_serial: 1415622106417`).

In case csv template change consists of headers update or add of new columns suppliers have to download new version and start using this one.

Otherwise upload will fail with mapping failure message.
