Error codes for web services-based requisition import

Description

With this feature, the SAP Ariba solution includes error codes in the existing error messages in web service response, when requisitions imports from external ERP systems fail.

Error codes for web services-based requisition import

Current Problem

Currently, when an error occurs while importing the requisitions from an external system using web services, the web service response includes only error messages and no error codes. Also, in some key scenarios, there are no error messages displayed.

Solution

With this feature enabled, the web service response for a requisition that failed to be imported from an external ERP system includes an error code in addition to the error message.

Benefits

This feature adds comprehensive error codes for web services. The error messages have been enhanced and new error messages have been included for those error scenarios that did not have corresponding error messages, providing better clarity for handling any failures in Requisition import.

Error codes for web services-based requisition import

Applicable to the Following:

- SAP Ariba Buying
- SAP Ariba Buying & Invoicing

Change Management for GA:

- None

Using this Feature:

Enabling: Contact Ariba Support to
