Roles and Responsibilities

PunchOut Configuration

Required cXML Configuration from the Supplier

Publication of your Catalog on the Ariba Network

Ariba Network Support

What is a PunchOut Catalog?

SAP Ariba 

What is a PunchOut Catalog?

The PunchOut Catalog is directly hosted by the supplier in their website.

The PunchOut Catalog allows end users to go directly to the supplier's and search for items.

The supplier is controlling and maintaining the content of their Catalog, according to their contract with Nufarm.

What is a PunchOut Catalog?

PunchOut catalogs are interactive catalogs stored on your website that use cXML to enable two-way communication of electronic commerce details. For PunchOut catalogs, procurement applications display a hyperlink instead of product or pricing details. When users click this hyperlink, their web browser displays a page from your local website.

Depending on how you implement this page, users can browse product options, specify configurations, and select delivery methods. Procurement applications pass organization IDs to your website, and you can use them to look up previously agreed-upon prices (contract prices).

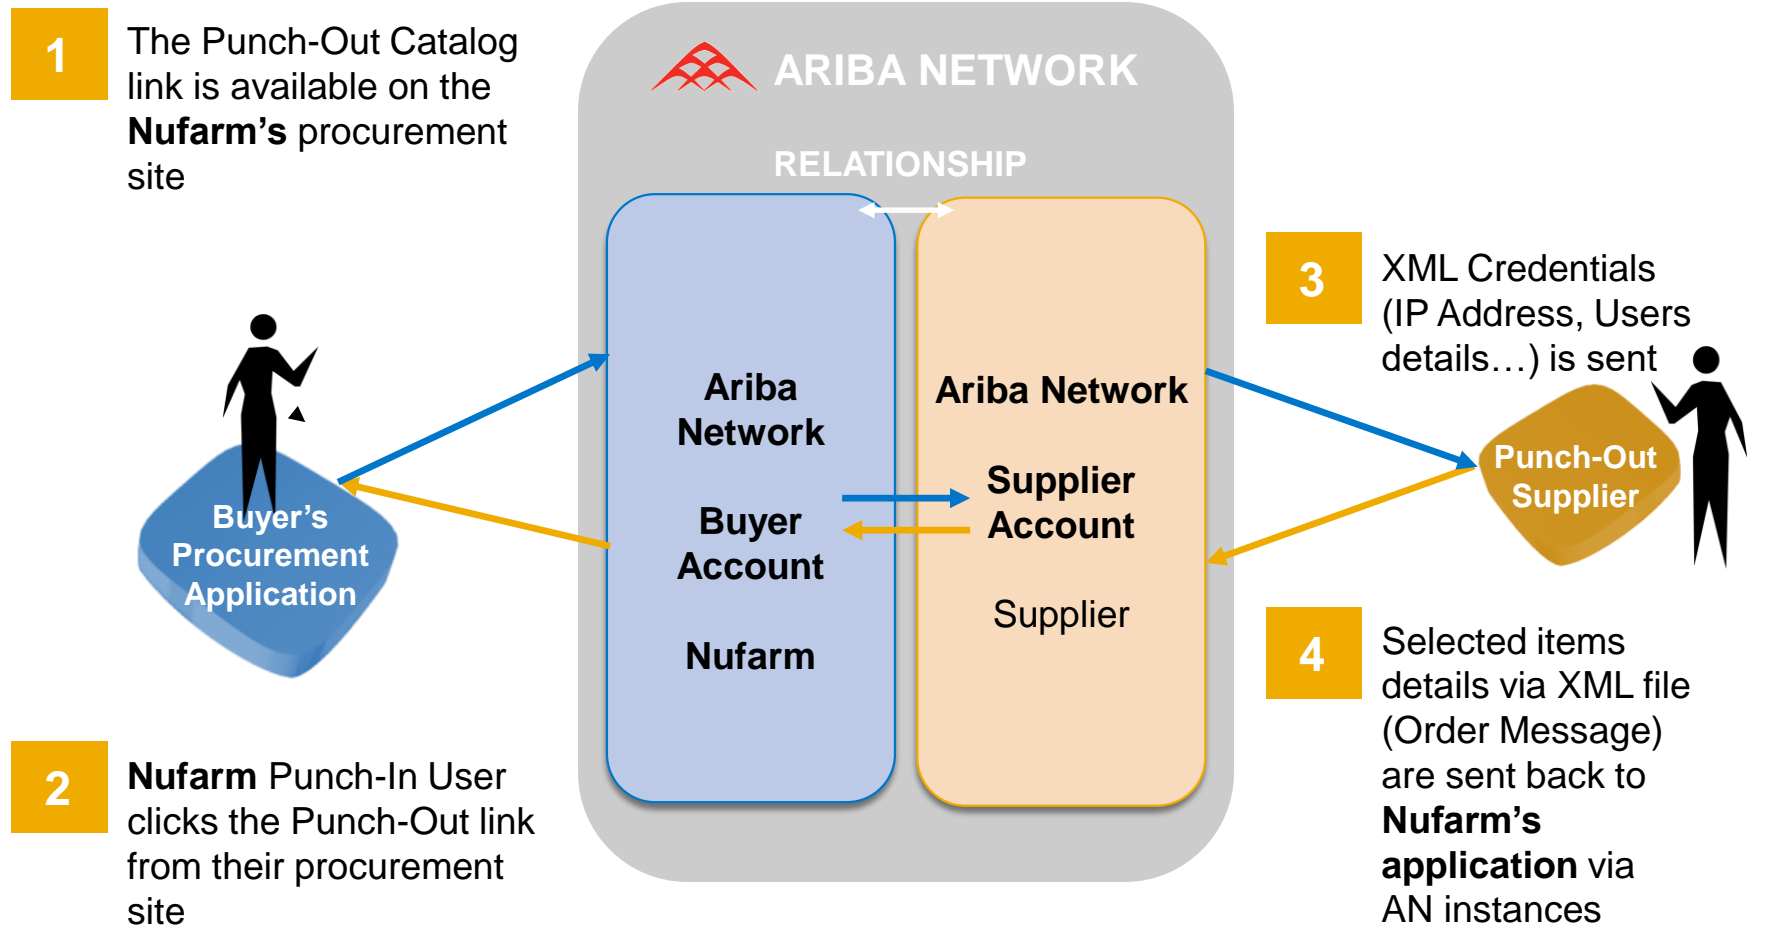

When users finish with this page, they click a button that returns the order information to Ariba Buyer. The fully configured products and their prices appear within the procurement application on users' purchase orders.

When deciding whether to use PunchOut catalogs, consider the following trade offs:

- They require all users to have full Internet access, which some companies do not allow.
- They require you to implement and maintain an interactive website, accessible 24 hours a day, seven days a week.
- The Internet can be slow, depending on connection type and Internet load.

Note: If your account is suspended, your customers can access your PunchOut catalogs, shop for products and services, and create a purchase order, however, Ariba Network does not send you the purchase order. PunchOut catalog users do not need to enter a user password for your site. They can be pre-authenticated by Ariba Network.

What is a PunchOut Catalog?

Roles and Responsibilities

SAP Ariba 

Roles and Responsibilities - Overview

Task	Ariba	Nufarm	Supplier
Configure Punchout Website			X
Establish a Trading Relationship on the Ariba Network		X	X
Configure Supplier Ariba Network account			X
Publish the catalog on Ariba Network			X
Activate the Catalog on Customer's On Demand Application	X	X	
Test Connectivity	X	X	X
Troubleshooting	X	X	X

Roles and Responsibilities - Details

Configure PunchOut website – Supplier

- Supplier has to configure their website before we engage with the Supplier for enablement activities, you therefore need to have your own technical team.

Relationship established between the Supplier and Customer – Customer/ Supplier

- Customer needs to send the relationship request and Supplier needs to accept it on the Ariba Network.

Configure Supplier Ariba Network account – Supplier

- Supplier has to configure their account with their cXML configuration and PunchOut set up.

Publish the catalog on Ariba Network- Supplier

- Create a catalog using “Create Punch Out only” button.

Activate the Catalog on Customer’s On Demand Application – Ariba Team / Customer

- Ariba Team will test the catalog using the Catalog Tester and upload the Catalog on Customer’s site.

Test Connectivity – Ariba Team / Customer / Supplier

Troubleshooting – Ariba Team/ Customer when needed / Supplier

- Ariba Team will assist Supplier to correct the potential connectivity issue(s).

Confirm Shared Secret: *

Profile URL

Ariba Network uses the cXML Profile transaction to retrieve a list of the URLs of supported cXML transactions from your organization. Ariba Network sends a ProfileRequest transaction once in 24 hours when it needs to send a cXML document and caches the response. If you need to reset your cached cXML profile on Ariba Network, click Reset Profile. The next time Ariba Network needs to send you a cXML document, it gets your updated cXML profile. It is recommended that you use the ProfileRequest method when you specify your cXML URLs.

Enter your Website's URL for receiving ProfileRequest documents.

Profile Url: Reset Profile

Punchout Url

PunchOut allows customers to perform shopping and product selection directly on your Website.
Enter your Website's URL for receiving PunchOutSetupRequest documents. If you support ProfileRequest documents (recommended), you can leave this field empty.

PunchOutSetupRequest URL:

Pricing Updates

If you support pricing list updates for catalogs, specify the URL where customers can obtain the updated pricing lists. The URL can either be a custom URL or the same as the PunchOutRequest URL.

Select type of PriceAvailabilityURL:

cXML Configuration

SAP Ariba 

cXML Configuration

Commodity Codes Required for Catalog Items:

- It is compulsory to associate a commodity code for each item in your catalog. A list of commodity codes is available in your Supplier Information Portal which is accessible from your Ariba Network account.

Configure Website to Accept Customer's ANID:

- You must configure your website in order to accept the ANID of Nufarm. Please make sure during the PunchOutSetupRequest configuration to add the ending -T to Nufarm's ANID when you will create your catalog in your TEST account. Nufarm might also request different accesses for its users, therefore make sure you configure your website using the UserIDs.

Consult cXML Documentation:

- In order to help you to configure your website to transact via cXML data with the Ariba Network, you should acknowledge the cXML requirements from Nufarm. You can find the Nufarm cXML Design Specification Guide and also refer to the Ariba cXML Solutions Guide and the cXML User Guide which are two guides available in your Supplier Information Portal.

Security via cXML

cXML is an open language defined by public Document Type Definitions (DTDs). These DTDs define cXML so that it is extremely flexible, which encourages its wide adoption.

- Supplier's PunchOut site must communicate through **HTTPS (Hyper Text Transfer Protocol Secure)** - for more information, see "HTTPS Connections" in Ariba cXML Solution Guide
- HTTPS protects all parties in PunchOut sessions: your customer, Ariba Network, and your PunchOut site.
- Supplier needs to document the transaction process flow into and out of your PunchOut site and identify which messages need to be coded.

Ariba has documentation available to assist in defining the process. The technical developer should read the following guides, available on Ariba – login to your Ariba account > select Help in top right corner > *Help Center* > *Learning Center* > *For Administrator*.

- **Ariba cXML Solution Guide** <http://supplier.ariba.com> (section Resources, cXML-Dokumentation)

cXML Configuration - cont.

Publication of a Catalog on the Ariba Network

SAP Ariba 

Publication of Catalog on the Ariba Network

Your catalog on Ariba Network **must first be created in your TEST account**. You will load your catalog on your production account only after publication and validation of the catalog in your TEST account.

1 Access your Ariba Network account

Go to: <http://supplier.ariba.com>

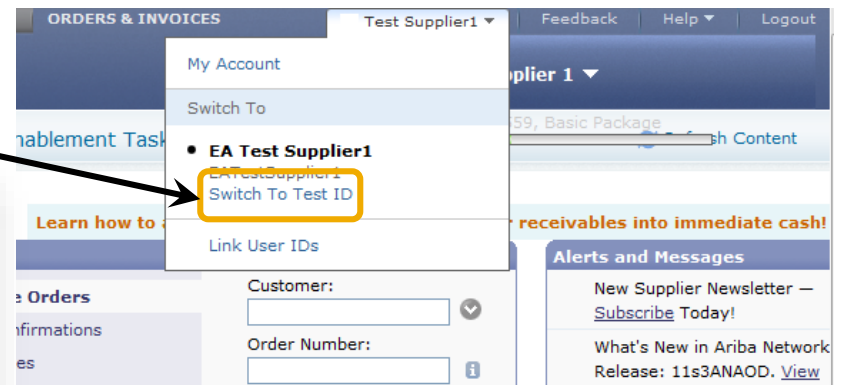

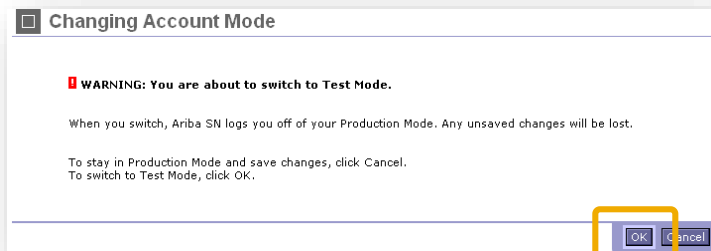

Enter your **Username & Password** and click **Log In** to access your Production account.

2 Switch to your Test Account

At User Navigator click Switch to Test Account.

Click OK.

Publication of Catalog on the Ariba Network

3 Catalogs tab

Be sure you are in your Ariba Network Supplier Test account and click the **Catalogs tab** on your Home Dashboard.

The Catalogs page is displayed.

4 Create your Catalog

Click on the button **Create PunchOut Only**.

The screenshot shows the Ariba Network Home Dashboard. The top navigation bar includes 'LEADS', 'PROPOSALS', 'CONTRACTS', 'ORDERS & INVOICES', and 'EA Test Supplier1'. The 'Test Mode' button is highlighted in red. The 'Catalogs' tab is selected in the main navigation bar. The account information 'EA99009097559-T, Basic Package' is highlighted in yellow. A yellow box labeled 'Test account' points to the account information. The dashboard also displays a 'Profile Completeness' section with a 45% progress bar, a 'Search' section with various filters, and an 'Alerts and Messages' section.

The screenshot shows the Ariba Network 'Catalogs' page. The top navigation bar includes 'LEADS', 'PROPOSALS', 'CONTRACTS', 'ORDERS & INVOICES', and 'EA Test Supplier4'. The 'Test Mode' button is highlighted in red. The 'Catalogs' tab is selected in the main navigation bar. The account information 'EA Test Supplier 4 ... EA99009097581-T, Basic Package' is visible. The 'Catalogs' section contains a table with columns: Customer Name, Catalog Name, Version, File Name, Type, Size, Visibility, Created By, Date Created, Status, and Date Status Received. The table is currently empty, showing 'No items'. Below the table, there are three buttons: 'Create Standard', 'Create Punchout Only' (highlighted in yellow), and 'Refresh'.

Publication of Catalog on the Ariba Network

5 Catalog Information

Enter information about your PunchOut Catalog.

The Catalog Administrator of the Buying organization can identify your catalog from each of these fields on the Ariba Network:

- **Catalog Name:** ex. Supplier_Customer_Country
- **PunchOut URL:** Enter the prefix https://
- **UN/SPSC code:** The UNSPSC code corresponding to the items' family/group of your catalog. Your customer will request to add a specific UNSPSC/ECLASS/Custom code. If not, you will have to choose the most representative code as only one value is accepted.
- **Brief Description:** Description of the catalog content. Searchable field by a customer. The key word from this field can be used by customer to search for the catalog's link.

Click **OK**.

Note: The UNSPSC codes used in catalogs support version 13.5. However, it can translate any earlier version to 13.5 and vice versa.

Create Punchout Catalog [OK] [Cancel]

Enter a catalog name and descriptive text. Customers can search using this information. ...

If there are no errors in the catalog fields, the catalog link will be validated by customer and published.

If there are errors related to the fields the catalog file should be re-uploaded.

Downloading the .cif file

- After the customer is selected please download the catalog index file into CIF format.

The screenshot displays the 'Edit a Catalog' interface. On the left, a sidebar contains three menu items: '1 Details', '2 Content', and '3 Subscriptions'. The main content area is titled 'Content Items' and includes a table with columns for 'Item No.', 'Unit of Measure', and 'Lead Time'. Below the table, there are two sections: 'CIF DOWNLOAD' and 'EXCEL DOWNLOAD'. The 'CIF DOWNLOAD' section shows the following details: 'Created at: Thursday 16 Dec 2010 5:21 AM GMT-08:00', 'Size: 2 KB', 'Type: CIF3.0', and 'Status: Ready'. A button labeled 'Download as CIF' is located below these details. The 'EXCEL DOWNLOAD' section includes instructions: 'Click 'Convert to Excel' to convert the catalog file to Excel format. Then click 'Refresh Status' to update converted Excel file.' and shows the following details: 'Created at:', 'Size:', 'Type: Excel', and 'Status:'. At the bottom of the 'EXCEL DOWNLOAD' section, there are three buttons: 'Convert to Excel', 'Refresh Status', and 'Download as Excel'. A navigation bar at the top of the interface contains buttons for 'Previous', 'Upload Catalog File', 'Download Catalog File', 'Update Header Data', and 'Exit'. An arrow points from the 'Download Catalog File' button in the navigation bar to the 'Download as CIF' button in the main content area.

Uploading the .cif file

- Click on **Upload Catalog File** under the Content tab.

PunchOut Catalog Statuses

Catalog Status	Definition
Validating	Catalog is in the process of being validated against the Ariba Network high-level syntactic and semantic validations.
Published	The catalog has been published to customers application manually loading catalogs. The Ariba Network sends an email notification to your customer informing them your company has published a catalog.
# Errors Found by Ariba Network	The catalog failed during Ariba Network high-level validation. The Ariba Network checks the catalog for syntactic and semantic errors. The network will also conduct a high-level validation of UNSPSC and Units of Measure codes, and checks for zero price values. These errors must be corrected first before the catalog can begin customer-specific validation rules. To view details of the error, click the “# Validation Errors Found by Ariba Network” link for this catalog on the catalog dashboard and view details of the error message within your Ariba Network account.
# Validation Errors Found by Customer	The catalog failed during validation of customer-specific rules in the Ariba Buyer Procurement application. During validation, the Ariba Buyer Procurement application validates the catalog against customer-specific validation rules. The catalog did not meet the customer’s catalog rules and validation failed. To view details of the error, click the “# Validation Errors Found by Customer” link for this catalog on the catalog dashboard and view details of the error message by punching in to the Ariba Buyer Procurement application.
Pending Buyer Validation	The catalog is uploaded successfully in the Ariba Buyer Procurement application and is pending validation.
Validated by Customer	The catalog is successfully uploaded in the Ariba Buyer Procurement application, passing validation, but not yet approved by the customer.
Approved	The catalog has been approved by the customer during the approval process.
Rejected	The catalog has been denied by the customer during the approval process.
Activated	The catalog is activated and available to users in the Ariba Buyer Procurement application.
Deactivated	A catalog version activated earlier is now deactivated. Catalogs can change statuses from Activated to Deactivated states and back.
Deleted	The catalog has been deleted by the customer in the Ariba Buyer Procurement application.
Changed	The customer made some changes to the catalog
