# Feature at a Glance

## Introducing: **Validation of Master Data**

### Customer challenge

Master data becoming out of date results in integration failures and use of incorrect information in contract Line Item Terms.

### Meet that challenge with **SAP Ariba**

Validate projects and line items against master data loaded in the system.  
Validate projects for change in list of choices from Template Item Definitions

### Experience key benefits

- Clean master data in contract projects
- Integrations execute without failure
- Validations for contract data are in place and users receive notification of changes from master data updates.

### Solution area

Strategic Procurement / SAP Ariba Contracts

### Implementation information

This feature is “off” by default. To enable this feature, please submit a Service Request to have this feature turned on for you

### Ease of implementation

 simple

### Region availability

 global

## Feature at a Glance

### Introducing: **Validation of Master Data**

#### Detailed feature information

1. When the master data loaded from ERP changes, say a PORG ins invalidated, validations will be performed and user will be notified
2. When a Custom Term is created in a Template (Line Item Definition) with “List of Choices” as answer type, when this list changes, this will validate the workspaces for right values during template upgrade.
