

# **Feature at a glance** SLP bi-directional vendor replication with S/4HANA On Premise

Kumar Raj Moorthy, SAP Ariba March, 2018

CONFIDENTIAL

### **Feature at a Glance**

### Introducing: SLP bi-directional vendor replication with S/4HANA On Premise

### Customer challenge

Meet that challenge with SAP Ariba

Experience key benefits

Customer wants to manage the supplier request/creation process in Ariba, collect certain vendor data from the supplier via Ariba Network, and maintain parts of the vendor master data in Ariba. Customer wants vendor master data to be replicated to S4HANA, including any subsequent changes to the vendor master data. Customer wants vendors created in S/4HANA to be replicated to SLP, and updates made in S/4HANA to existing vendors to be overwritten in SLP (i.e. S/4HANA can act as master). All in near-realtime, based on SAP standard technology.

Business Partner webservice integration is available natively in SLP, supporting either direct or mediated connectivity (i.e. via SAP PI or similar middleware). This release includes the validation of bi-directional replication of vendor master data using the Business Partner web services between SAP Ariba SLP and SAP S/4HANA on premise 1610.

Over 480 vendor master fields are supported with 1:1 mapping from SLP, via BP webservice elements, to Business Partner tables (BUT000 etc), which in turn are synchronized via CVI to vendor master tables (FLA1 etc).

Enables high-fidelity replication of vendor master data, bi-directional, in near-realtime. Establishes a unified vendor master, including automatic re-synchronization on changes.

#### Solution area

Strategic Sourcing / Supplier Management / Supplier Lifecycle and Performance

#### **Enablement information**

Business Partner webservice is on by default when SM feature is enabled in realm (i.e. when SLP or SIPM new architecture is deployed). Recommended to request Ariba Support to enable feature SM-5663 "SM Admin - version 2" as this extends the available display and configuration parameters. For detailed info, also on ERP config, see integration documentation in Ariba Connect.

### **Feature at a Glance**

# Introducing: SLP bi-directional vendor replication with S/4HANA On Premise

#### Detailed feature information

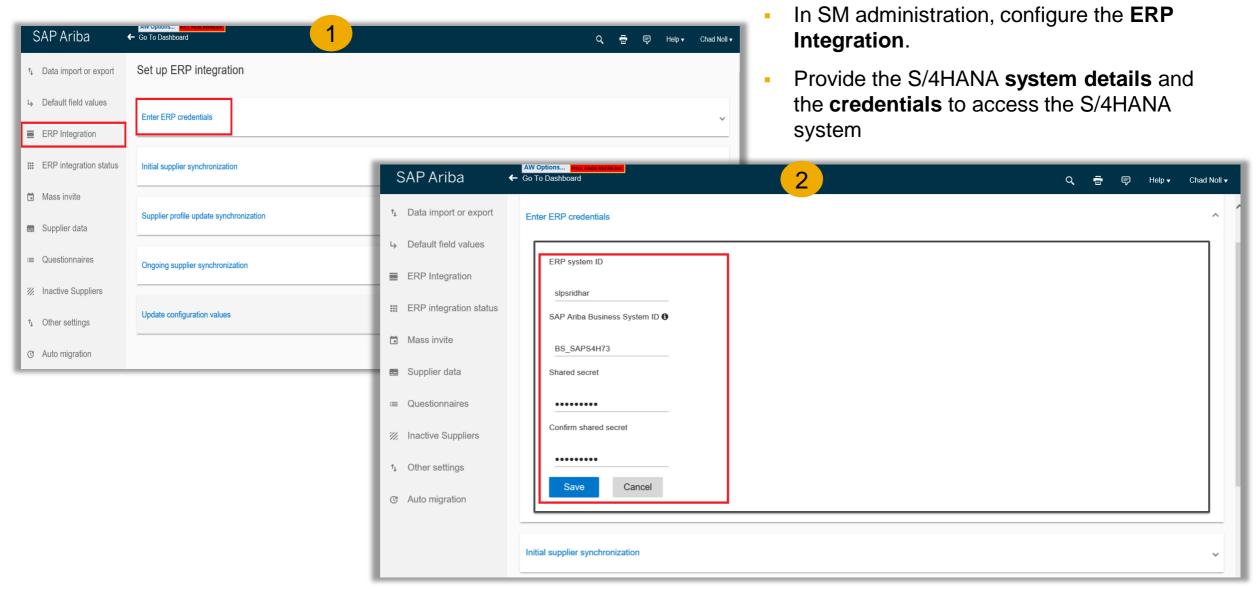

This release includes the validation of bi-directional replication of vendor master data using the Business Partner web services between SAP Ariba SLP and SAP S/4HANA on premise 1610.

Same functionality is available as part of SIPM new architecture. Note: this is NOT the classic SIPM product, but refers to a deployment option of the SLP which therefore has the same vendor model and integration capabilities, but excludes the matrix-based qualification/disqualification and preference processes.

The specific vendor master data field for which bi-directional replication was validated are listed at the end of this document. As more SLP capabilities come available, like bank and tax component, these will be included in additional validations, and updated in this Knowledge Transfer document.

Note: Integration with SAP S/4HANA cloud edition is NOT supported, and OUT OF SCOPE for this release.

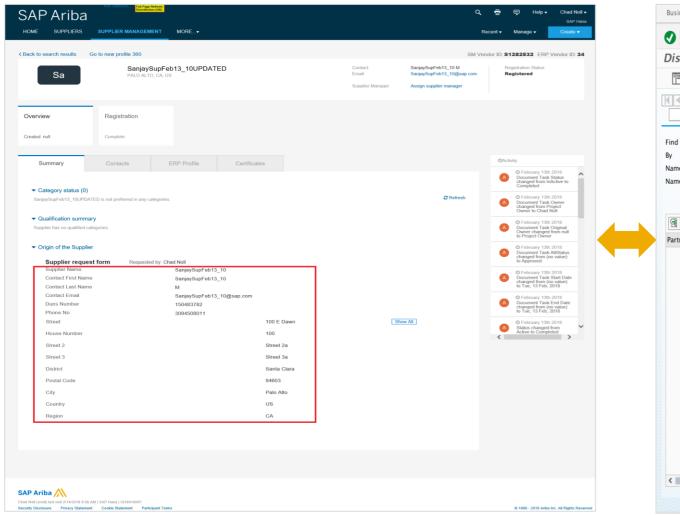

# **SLP** configuration for S/4HANA Integration

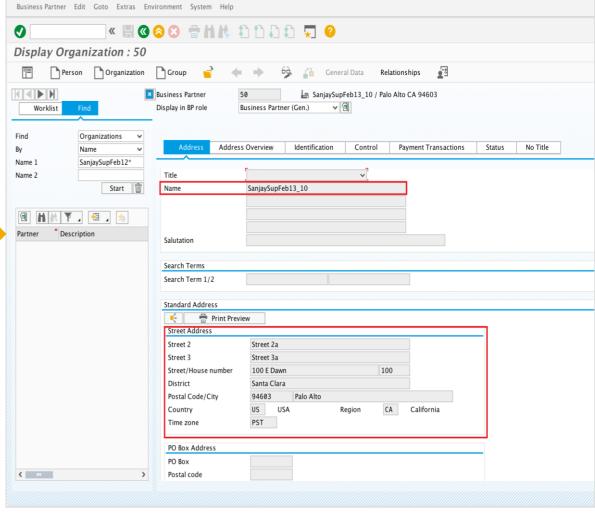

### SLP <-> S/4HANA Supplier basic data synchronization

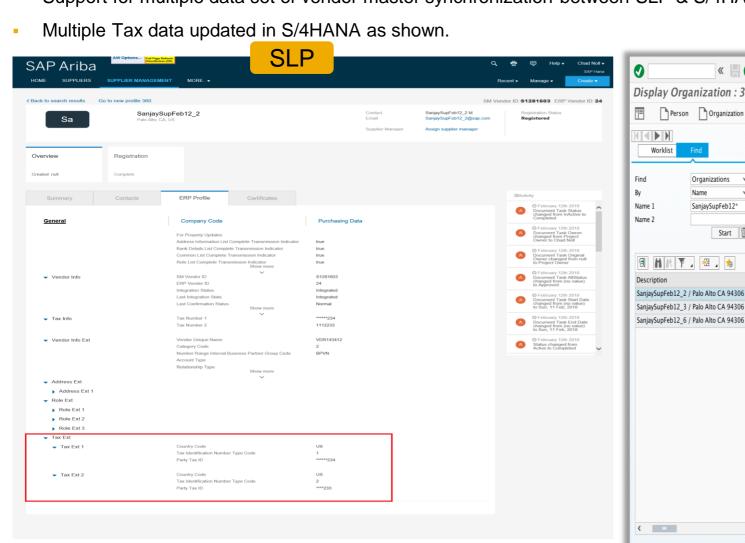

#### S/4HANA

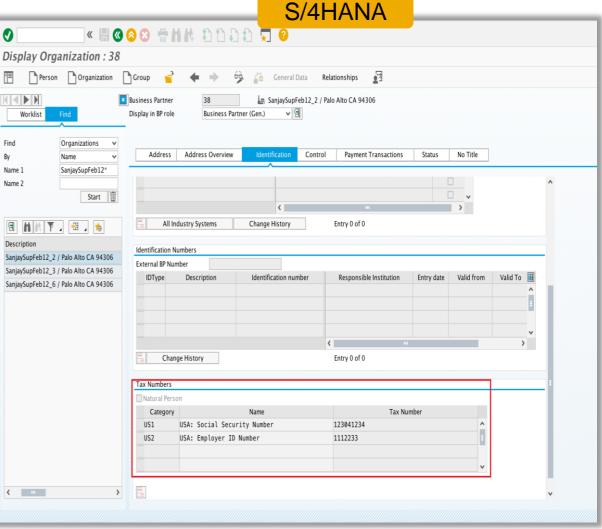

### SLP <-> S/4HANA – Multiple Tax data sync

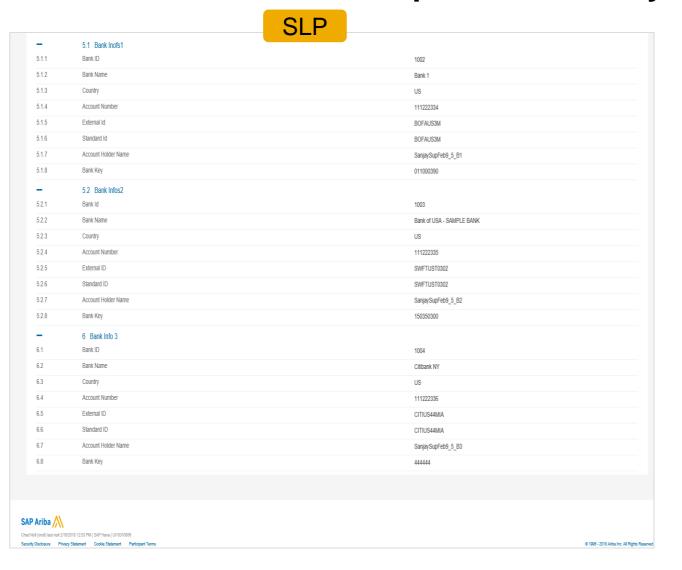

Support for multiple data set of vendor master synchronization between SLP & S/4HANA OP.

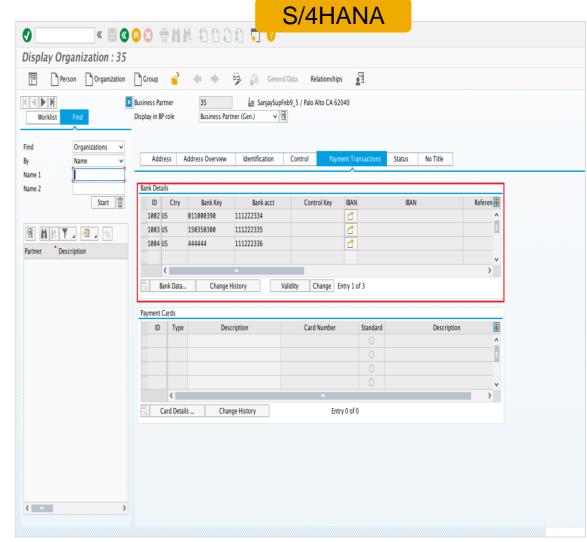

SAP Ariba //

### SLP <-> S/4HANA – Multiple Bank data sync

# SLP <-> S/4HANA – Bi-directional synchronization – verified data set

Supplier Data	SLP field mapping	S/4HANA field
Supplier name	vendor.vendorInfo.name1	LFA1 -> Name
Supplier address	vendor.address.*	LFA1 -> ADRNR
Supplier contact Information     Email     Phone	<ul><li>vendor.contacts.email</li><li>vendor.contacts.telephone</li></ul>	LFA1 -> TELF1
<ul><li>Identifiers:</li><li>DUNS#</li><li>TaxID</li></ul>	<ul><li>vendor.vendorInfo.dunsId</li><li>vendor.taxInfo.taxNumber1</li></ul>	LFA1 -> KRAUS
Bank details <ul><li>Bank Country</li><li>Bank Key</li><li>Bank Acct Number</li></ul>	<ul> <li>vendor.bankInfos.country</li> <li>vendor.bankInfos.key</li> <li>vendor.bankInfos.accountNumber</li> </ul>	LFBK -> BANKS LFBK -> BANKK LFBK -> BANKN
Tax Info Type Tax Number	<ul> <li>vendor.taxInfo.taxType</li> <li>vendor.taxInfo.taxNumber1</li> <li>vendor.taxInfo.taxNumber2</li> <li>vendor.taxInfo.taxNumber3</li> <li>vendor.taxInfo.taxNumber4</li> <li>vendor.taxInfo.taxNumber5</li> </ul>	LFA1 -> J_1AFITP_D LFA1 -> STCD3 (STCD1) LFA1 -> STCD2LFA1 -> STCD3 LFA1 -> STCD4 LFA1 -> STCD5
