Introducing: Option to soft delete line items in a Contracts Line Item Document (CLID)

Customer challenge

In CLID when a user deletes a line item, it gets physically deleted. While integrating such line items with ERP, the delete status is sent and the line is *marked* as deleted in ERP. Customers wanted to have a similar functionality in CLID as well where the deleted line items are still shown in the UI but marked as deleted

Meet that challenge with

SAP Ariba

This feature provides users the option to disable line items in the CLID thus preventing further edits while retaining the line item on the User Interface(UI) for future reference

Experience key benefits

Allows users to retain the entire history of items included in the CLID while disabling the items that are no longer required

Solution area

SAP Ariba Contracts

Implementation information

Feature is on by default.

Prerequisites and Limitations

NA

Feature at a Glance

Introducing: Option to soft delete line items in a Contracts Line Item Document (CLID)

Detailed feature information

1. With this functionality users can soft delete line items
2. Deleted line items will remain the CLID and will be shown to the user but muted – no changes are allowed to that line items
3. Importing of line items through excel or web services will not update / change these deleted line items
4. When a sourcing follow-on project is created from a CLID, the deleted line items will be copied to the sourcing event
