 **Run Simple**

## Feature at a Glance

# Introducing: Cancellation of a replenishment order

Ease of implementation  Low touch / Simple  
Geographic relevance  Global

### Customer challenge

1. Recently replenishment order scenario for SMI is getting released
2. There was no ability to cancel the replenishment order
3. Visibility in Replenishment Order and PO linkage
4. Alerts for Buyers and Suppliers for projected stock levels
5. Control on replenishment quantity updated by suppliers was missing

### Meet that challenge with **SAP Ariba**

1. This feature helps in completing the RO flow by providing the ability to suppliers to cancel the RO and linking it to PO, alert mechanism as well as quantity control to replenish more than maximum stock.

### Experience key benefits

1. This feature helps completing the RO flow by providing the ability to suppliers to cancel the RO and linking it to PO. The RO list page provides the PO link and PO status.
2. Both supplier and buyer gets the RO alerts.
3. The feature also enables buyer setting up an additional rule to prevent suppliers from replenishing more than maximum stock.

### Solution area

SAP Ariba Supply Chain Collaboration

### Implementation information

This feature is “on” by default for customers of **SAP Ariba SCC and Inventory Add on Buyers**. Require configuration.

### Prerequisites and Limitations

1. This feature requires that the buyer system has been entitled for SAP Ariba Supply Chain Collaboration and for the inventory collaboration component, and that a buyer administrator has enabled the supplier for SAP Ariba Supply Chain Collaboration.
2. The transaction rule Allow sales orders must be enabled.

## Feature at a Glance

# Introducing: Cancellation of a replenishment order

## Supplier user interface changes

Suppliers now have ability to cancel the replenishment order created.

## Feature at a Glance

### Introducing: **Cancellation of a replenishment order**

#### Changes to existing functionality made by cancellation of replenishment order feature

##### Ø Buyer user interface changes

New transaction rule introduced: Require suppliers to replenish within the proposed range of minimum and maximum quantities appears on the editing page for the Replenishment orders section of the Replenishment orders tab, which is on the Planning à Planning collaboration settings page.

The screenshot shows the SAP Planning Collaboration settings page. The navigation bar includes HOME, INBOX, OUTBOX, QUALITY, PLANNING (highlighted), CATALOGS, SUPPLIER ENABLEMENT, ADMINISTRATION, and REPORTS. Below the navigation bar, there are tabs for Forecast and Planning Collaboration. The main content area is titled 'Planning settings' and has three sub-tabs: General, Manage views, and Replenishment orders (highlighted). Under the 'Replenishment orders' tab, there are several settings:

- Replenishment horizon, in number of days: 180
- Replenishment time bucket: Weekly
- Allow suppliers to edit price: Yes
- Require suppliers to replenish within the proposed range of minimum and maximum quantities: Yes (highlighted with a red box)
- Enable replenishment orders for:
  - All suppliers (selected)
  - Selected suppliers
