Customer challenge

Suppliers were not able to release shipped quantities in case a ship notice failed to be delivered to the buyer's ERP.

To fix these issues, an external manual process and eventually a data fix was needed.

Meet that challenge with SAP Ariba

When ship notices are not delivered to the buyer's ERP, Ariba Network changes the routing status of the document to **Failed**.

Suppliers can now cancel a failed ship notice, which releases the shipped quantities specified in the ship notice document.

Experience key benefits

Suppliers will have a mechanism to release shipped quantities in a failed ship notice document, which is the manual cancellation of the document on the Ariba Network.

In addition, if configured, Ariba Network sends a ship notice failure notification. Integrated suppliers will also receive a Status Update Request (SUR) message indicating the ASN failure.

Solution area

Operational Procurement / Ariba Network / Supplier

Implementation information

This feature is "on" by default. No action is required to utilize this feature
