Customer challenge

Current data contributing to the risk exposure of monitored suppliers did not include financial data elements. Contributing factors to the financial domain primarily included adverse news media and publicly available financial data. As a result customers did not have a complete view of the true risk exposure when monitoring and assessing suppliers.

Solution area

SAP Ariba Supplier Risk

Meet that challenge with SAP Ariba

Supplier Risk now has the ability to integrate with third party financial providers to provide a more complete view of the risk exposure of monitored suppliers.

These third party providers must be registered with the SAP Ariba approved partner program. After the buyer obtains a license with the approved third party provider and enables their realm with the proper credentials, financial data contributing to the risk exposure of monitored suppliers can be tracked providing a more complete view of the risk exposure of the monitored suppliers.

Implementation information

This feature is “on” by default for customers of SAP Ariba Supplier Risk.

To enable this feature, in order to receive data from certain subscription-only providers, providers must complete the SAP Ariba partner program prior to customer’s licensing. Each customer must set up a license with the provider independently and then register the license data in SAP Ariba Supplier Risk.

Experience key benefits

A new Financial tab has been added to the supplier profile. Users will have the ability to submit suppliers to a licensed financial third party provider for financial risk evaluation. Specific financial data elements will be retrieved and displayed within the supplier profile financial tab along with a chart that illustrates information from the time the supplier is evaluated. This financial data will also be a contributing factor to the risk exposure of the monitored supplier. Financial data can be configured using the risk configurator to adjust the weightings based on customer requirements.

Prerequisites and Limitations

Entitlement to SAP Ariba Supplier Risk

Feature at a Glance

Introducing: Third party financial provider integration into Supplier Risk

Detailed feature information

This feature allows Risk Manager users to register to use the services of third party financial subscription-only content partners who provide financial risk data. After registration with a financial partner via the user settings > content and services provider area in Supplier Risk, users can then submit individual suppliers for risk analysis to the third-party financial partner they have licensed.

The screenshot displays the 'Supplier risk administration' interface. The navigation bar includes 'HOME', 'SUPPLIER RISK' (highlighted), 'SUPPLIER MANAGEMENT', and 'MORE...'. The left sidebar lists several options: 'Reports', 'Configure risk score', 'Import data', 'Configure alerts', 'Customize supplier alerts', and 'Content and service providers' (highlighted). The main content area is divided into three sections: 'Risk content domain' with a list of categories (Adverse media, Corporate data enrichment, Country risk, Environmental & social, Financial, Operational, Regulatory & legal); 'Default providers' with the message 'No providers are available for the selected Domain.'; and 'Active 3rd party providers' which shows a single provider card for 'Financial Provider' with a 'COMING SOON!' warning icon and a green checkmark. Below this is the 'Available providers' section, also with the message 'No providers are available for the selected Domain.'

Feature at a Glance

Introducing: Third party financial provider integration into Supplier Risk

Detailed feature information

Data is updated on a consistent schedule and displayed in a graph and chart view within the supplier profile. The financial tab will display adverse media from the financial risk category, financial risk exposure.

Financial data is included as a contributing factor to the potential risk exposure. Risk managers have the ability to change the out of the box settings for financial data by using the risk configuration workbook.
