## Customer challenge

Today, when a user performs a change order (e.g. change requisition), and changes the price or quantity of the items, the system automatically re-defaults accounting details based on the system configuration. This can happen without the user paying attention to the change, leading to involuntary accounting changes.

## Meet that challenge with

### SAP Ariba

With this feature enabled, the SAP Ariba solution does not re-trigger the defaulting of accounting details when doing a change order (e.g. change requisition).

When enabled, it prevents triggering the defaulting of the Commodity Export Map Entry (CEME) selection (account type defaulting) when a user edits the price or quantity values of the line items on a requisition during a change requisition activity.

## Experience key benefits

This feature ensures accounting details are not involuntarily changed during change order processing.

## Solution area

- SAP Ariba Buying
- SAP Ariba Buying and Invoicing

## Implementation information

This feature is “off” by default. To enable this feature, please submit a Service Request to have this feature turned on for you.
