### Customer challenge

CMS Approval Flow feature allows line level approval of items to be assigned to different approvers. The traditional catalog approval though allows a complete document level approval only.

Customers may either want a two level approval to be in place where category specific approvers approve certain items and eventually a catalog manager approves the entire document or may just want a one level approval by category specific approvers before the content is published.

This level of flexibility is not possible and the content always goes through the two levels of approval.

### Meet that challenge with **SAP Ariba**

This feature allows the ability to configure a customer realm such that second-level approval of catalog subscriptions is not triggered after the associated catalog content document-level approval requests have been approved by approvers in the CMS.

If a customer desires, both levels of approval can be configured as well.

### Experience key benefits

This feature allows flexibility in setting up a single-level or two-level approval of the content documents .

### Solution area

SAP Ariba Catalogs  
SAP Ariba Buying  
SAP Ariba Buying and Invoicing

### Implementation information

This feature is disabled by default. To enable this feature, have your Designated Support Contact (DSC) submit a Service Request (SR). An SAP Ariba Customer Support representative will follow up to complete the request.

### Prerequisites and Limitations

CMS is enabled as part of the Catalogs functionality
