Introducing: Segregation of data based on authorizations for buyer users

Customer challenge

- Buyers require the ability to segregate a buyer user's access to data, limiting visibility and actions based on assigned roles and responsibilities.
- Currently the access on document content via the AN buyer portal is related to the ANID and permissions the buyer user is assigned to.
- All documents and content is shown to the user, without segregation of company dependent organizational structures or legal compliant reasons.

Meet that challenge with

SAP Ariba

This feature provides segregation of buyer users by company code, plant, and planner code for purchase orders, order confirmations, and ship notices.

Experience key benefits

- ➤ Feature provides a way for buyer administrators to segregate data, visibility, and actions based on buyer roles and responsibilities.
- ➤ This capability helps organizations meet legal, financial, or security needs to limit what information a buyer can access.

Solution area

SAP Ariba Supply Chain Collaboration

Implementation information

This feature is automatically on for all customers with the applicable solutions but requires customer configuration.

Prerequisites and Limitations

Authorization profiles apply only to data displayed in the Ariba Network user interface.

The **File Download** and **Report** tabs do not show filters for segregated data.

Introducing: Segregation of data based on authorizations for buyer users

Buyer administrator interface changes

A Manage Authorization Profiles section. Buyer administrators can create or edit a buyer profile to define what data can be seen within a particular Company code, Location, or Purchasing organization. Each field accepts multiple values.

Profile attributes are created for the Outbox Orders and Releases page.

Introducing: Segregation of data based on authorizations for buyer users

Buyer user interface changes

- > Buyer users can see only data on the Outbox Orders and Releases page that matches the company code, location, and purchasing organization choices that a profile they are assigned gives permission to see. Data that has a different value or no value is not visible.
- > Documents with no Company code value are visible only to users with no Company code value set in their assigned profile.
- ➤ If a buyer is assigned a profile that restricts access to data that the buyer has configured alerts for, alerts are no longer created for the restricted area.
- ➤ No data visibility restrictions apply to a buyer who is not assigned an authorization profile.
