Customer challenge

Suppliers have no visibility into consignment inventory levels as the information on inflows and outflows of stock is dispersed across multiple Goods Receipts and Consignment Movements.

Meet that challenge with SAP Ariba

With the consignment report feature, suppliers can generate a report in Excel format to help them reconcile their consignment records. This report consolidates goods receipt and consignment movement data for a specified buyer by displaying consignment stock inflows (Goods receipt) and outflows (consignment movements).

Experience key benefits

Provides better visibility into consignment inventory and related inflows and outflows into/out of consignment stock. Feature allows more accurate and timely invoicing when consignment stock is withdrawn by buyer.

Solution area

SAP Ariba Supply Chain Collaboration

Implementation information

This feature is **automatically on** for all customers with the applicable solutions and is ready for immediate use.

Prerequisites and Limitations

This Ariba Network feature is applicable to:

- All SAP Ariba Supply Chain Collaboration buyer users
- All supplier users with a relationship with one or more SAP Ariba Supply Chain Collaboration buyers.

Limitations

- A consignment report can include data for up to the last 60 days.
- A maximum of 60,000 consignment report records can be downloaded. Reports with more than 60,000 records are truncated when downloaded.
- The consignment report retrieves data for a single specified supplier or customer.

Feature at a Glance

Introducing: Consignment report

Buyer posts consignment withdrawal of 50 EA from consignment into own stock. Consignment stock is reduced by 50 EA to 50 EA.

Feature at a Glance

Introducing: Consignment report

In order to provide suppliers and buyers with a consolidated view of consignment inventory in- and outflows, the feature compares certain fields in consignment movement items and goods receipts. When a match is found, certain values from the goods receipt are added to the consignment movement item.

- If Tracking ID values match, this feature adds the Order Number, PO Item, and Ship Notice # values.
- If no Tracking ID value is provided but Ship Notice # values match, this feature adds the PO Item and Ship Notice # values.
- If no Tracking ID value is provided but PO Item values match, this feature adds the PO Item value

Feature at a Glance

Introducing: Consignment report

Buyers and suppliers can download a file of the consignment report in Excel format by creating/editing a job in the UPLOAD/DOWNLOAD area. Click **Create/Edit** and select **Consignment** as the job Type in the dropdown box. When job type is selected the pop-up allows to enter additional search criteria. Click **Run** to execute the job.

The screenshot displays the Ariba Supply Chain Collaboration interface. At the top, a dark blue navigation bar contains the text 'Ariba Supply Chain Collaboration' and 'Test Mode'. Below this, a horizontal menu lists various sections: HOME, INBOX, OUTBOX, QUALITY, PLANNING, CATALOGS, REPORTS, UPLOAD/DOWNLOAD (highlighted), and MESSAGES. The main content area is divided into two parts. On the left, a 'Jobs' table lists various jobs with columns for Name, Type, and Created. On the right, a 'Create/Edit Job' pop-up window is shown in two states. The top state shows the 'Name' field set to 'FU_Consi' and the 'Type' dropdown menu open, with 'Consignment' selected. The bottom state shows the 'Job Search Criteria' section with fields for Customer, Start date, and End date, and a 'Run' button highlighted with a red box. A red arrow points from the 'Consignment' option in the dropdown to the 'Run' button in the bottom state.

Feature at a Glance

Introducing: Consignment report

The report includes two new fields, Tracking ID and Supplier Reference #.

Records are in alphanumeric order by a combination of Customer Part No., Supplier Part No., and Location values, in that order. Each set of sorted records is then grouped by document type: goods receipt (Consignment In) and consignment movement (Consignment Out).

Within each set of related goods receipt and consignment movement records, color highlighting identifies rows with the following calculations:

- Blue highlighting—The total quantity of goods receipts or consignment movements for the record set.
- Yellow highlighting—The consignment inventory on hand for the record

Supplier Part No.	Description	Location	Location	Purchase	Purcha	Ship Notice	Document No.	Supplier Reference #	Tracking ID	Receipt Date	Issue Date	Quantit	Unit	Amount	Curren	Document Type	Settlement	Invoice	Ordering	Total	Consignment
