**SAP Ariba**

# Feature at a Glance
## Support for classic approval rule configuration in custom forms

Arundhati Kumar, SAP Ariba
Target GA: February, 2019

THE BEST RUN **SAP**

# Feature at a Glance

## Introducing: **Support for classic approval rule configuration in custom forms**

### Customer challenge

Currently you are able to configure simple approval workflows within custom forms. Customers needed richer capabilities that exist for our Procurement customers.

### Meet that challenge with
### SAP Ariba

Custom forms are now integrated with the same configurable approval rules capabilities as in SAP Ariba Procurement solutions. For each form document, you can build the approval workflow and define conditions and actions for each rule.

### Experience key benefits

You are now able to build and define robust approval rules for Custom Forms. You are able to choose which approval flow to apply to your form documents from the following three options:
- *Custom forms* defines the default approval flow in the forms builder.
- *Classic* defines the approval flow configured in SAP Ariba Procurement solutions.
- *None* defines no approvers required for submitted form documents

### Solution area

SAP Ariba Buying and Invoicing
SAP Ariba Buying
SAP Ariba Buying and Invoicing, with guided buying capability
SAP Ariba Buying, with guided buying capability
SAP Ariba Invoice Management

### Implementation information

This feature is enabled for all customers and is ready for immediate use.

### Prerequisites and Limitations

**Prerequisites:**
- Members of the Custom Form Designer group can design forms, configure classic approval processes, and publish forms.
- Members of the Custom Form Administrator group can activate and deactivate forms.

**Limitations:**
- For custom forms fields, the Internal Field Name column shows a unique ID and the field label in the Field Label column that is mapped to the field.
- The approvable edit rules functionality is not supported in custom forms.
