Introducing: Assign Multiple Values to Different Matrix Items

Customer challenge

Today the matrix screen assumes that all items within the matrix will have the same matrix values. For example, it assumes that if you have Regions for France, Germany, and US, then both items in the matrix will have all 3 values applied. However, in some instances the regions will only be applicable to some of the items.

Meet that challenge with SAP Ariba

Provide user interface improvements to easily create and remove line items based on matrix factors.

Experience key benefits

Captures details of specific user requirements.

Solution area

SAP Ariba Strategic Sourcing Suite

Implementation information

This feature is on by default and enabled for all customers.

Prerequisites and Restrictions

Must be a user of matrix terms/ requirements
