Introducing: Purge of category attribute hierarchy data

Customer challenge

Currently customers do not have the ability to completely purge the article master data and start from scratch with a refreshed set of data.

Meet that challenge with

SAP Ariba

- Customers can permanently remove all data relating to a category attribute hierarchy from SAP Ariba system by performing a purge from user interface, particularly while in test system or if data was corrupted.
- A purge of category attribute hierarchy data does not affect any existing sourcing events or contracts that might be using data from the category attribute hierarchy.

Experience key benefits

- Allows a reset of data to reduce problems and confusion of data.
- Removes the need to call the help desk to do a manual deletion.

Solution area

SAP Ariba Strategic Sourcing Suite

Implementation information

This feature is **automatically on** for all customers with the applicable solutions and is ready for immediate use.

Prerequisites and Restrictions

Category attribute hierarchy must be enabled in your site

Feature at a Glance

Introducing: Purge of category attribute hierarchy data
