Introducing: Enhancement to importing requisitions with expired or deactivated catalog items

Customer challenge

Previously, if a match against a catalog or contract item was found during requisition import, the item was marked as a catalog or contract item - even if the matched item had expired. As a result, the requisition itself was invalid and left in Composing state. As the type of line cannot be edited, the user had to manually edit the requisition, delete the line and add a non-catalog item with the same content.

Meet that challenge with **SAP Ariba**

With this feature, during requisition import, items are imported as non-catalog items if matched catalog or contract items are inactive or have expired during requisition import. This allows the requisition to be valid and submitted, resulting in faster processing time.

Experience key benefits

This capability excludes deactivated or expired catalog items from the item master mappings while importing requisitions from ERP systems to the buying solutions from SAP Ariba, providing more efficient processing of imported requisitions.

Solution area

- SAP Ariba Buying
- SAP Ariba Buying and Invoicing

Implementation information

To have this feature enabled, please have your Designated Support Contact (DSC) submit a **Service Request (SR)**

- Application.Purchasing.ExcludeItemMasterIfCatalogInactive

Prerequisites and Restrictions

This feature applies to customer who has configured the requisition import feature of SAP Ariba
