SAP Ariba

Feature at a Glance
Map header-level RFQ form fields to sourcing projects

Jaideep Tungare, SAP Ariba
Target GA: November, 2019

THE BEST RUN SAP

Feature at a Glance

Introducing: **Map header-level RFQ form fields to sourcing projects**

Customer challenge

Through Guided Buying it is currently possible to send RFQ form data to sourcing requests and sourcing events only as line-item data.

It is not possible to send RFQ form data to sourcing requests or sourcing events in SAP Ariba Sourcing as header level data.

Meet that challenge with
SAP Ariba

With this feature, data on RFQ forms can now be mapped to header level fields in the Overview tab in SAP Ariba Sourcing events. This would include standard data, master data and custom fields.

With the necessary data field mapping (refer to feature details in the Release Guide) between Guided Buying RFQ form and SAP Ariba Sourcing event fields, data shall flow seamlessly between the two applications.

Experience key benefits

Having header level data auto-populated in SAP Ariba Sourcing events reduces manual efforts which then allows work to be assigned to the correct resources in the procurement organization to drive sourcing tasks and approval flows.

Automatic data flow leads to higher data accuracy.

Solution area

Guided Buying capability with the following solutions:
- SAP Ariba Buying
- SAP Ariba Buying and Invoicing

Implementation information

This feature is automatically on for all customers with the applicable solutions but requires **customer configuration**.

Prerequisites and Restrictions

For fields defined as editable in SAP Ariba Sourcing data does NOT flow back to Guided Buying
