Introducing: **Importing amendments from external systems**

Customer challenge

Previously amendments could only be manually created in the SAP Ariba Buying solution, and not imported from an external system.

Meet that challenge with **SAP Ariba**

Starting with this release, buyer users can import amendments based on imported requisitions and process change orders in the buying solution. Using imported amendments, buyers can add new line items, edit header and line-level fields, and delete line items from the associated requisition.

This feature also supports canceling an amendment in the Composing state.

Experience key benefits

Now customers can integrate order amendments from external systems and process them through SAP Ariba.

Solution area

- SAP Ariba Buying
- SAP Ariba Buying and Invoicing

Implementation information

To have this feature enabled, please have your Designated Support Contact (DSC) submit a **Service Request (SR)**.

Prerequisites and Restrictions

- This feature is applicable for sites configured for order amendments and the parameter AllowSimultaneousAmendmentsOnRequisitions is enabled
