Introducing: **Distributing invoice header-level charges to line items for capitalization of assets**

Customer challenge

Previously, invoices with asset items that had header charges required a user to manually distribute these charges proportionally to the lines.

Meet that challenge with **SAP Ariba**

With this feature, each header-level charge on an invoice consisting of at least one asset item can be automatically distributed across all line items on the invoice to account for the related charges when assets are capitalized.

Experience key benefits

This feature streamlines processing of charges on asset invoices.

Solution area

- SAP Ariba Buying and Invoicing
- SAP Ariba Invoice Management

Implementation information

To have this feature enabled, please have your Designated Support Contact (DSC) submit a **Service Request (SR)**.

Prerequisites and Restrictions

- This feature is applicable only for SAP-integrated sites with Asset accounting.
- The PO Line Amount Variance exception may need to be disabled or tolerances applied, as prorated header-level charges get added to the line-level charges.
