## PREFACE

This document outlines the requirements for digital data interchange using the Edifact format.

Initially the uses segments and their meaning within a message are described. The example files used in this guide are examples only. In the following chapter all segments are described in detail. Additionally, you will find a document example as well as a branching diagram.

This documentation focuses on an explicit version, i.e. the segments are documented as they would possibly occur in practice. Thus, the maximum number of repetition of the individual segments is limited to the ones which are actually used. This does, however, not constitute a limitation, but rather a more detailed description of the example used.

## INTRODUCTION

Introduction:

A message from the seller to the buyer, responding to a purchase order message or a purchase order change request message.

The United Nations Order Response Message serves as response/confirmation for the Purchase Order and Purchase Order Change messages.

## USING THIS GUIDELINE

The DETAILED SEGMENT DESCRIPTION shows the Standard Edifact Rules, defined in D.96A, and the User Rules, recommended by Ariba Network.

Unused segments are not shown.

The codes defining in detail Segment and Element usages are:

| Status | Standard Edifact | SAP Ariba Usage                      |
|--------|------------------|--------------------------------------|
| M      | Mandatory        | Must Use / Required by Ariba Network |
| C      | Conditional      | Conditional                          |
| X      | Not Used         | Not Used                             |

Descriptions for segments have been provided alongside and detailed explanation will follow in a future release.

## SEGMENT SUMMARY

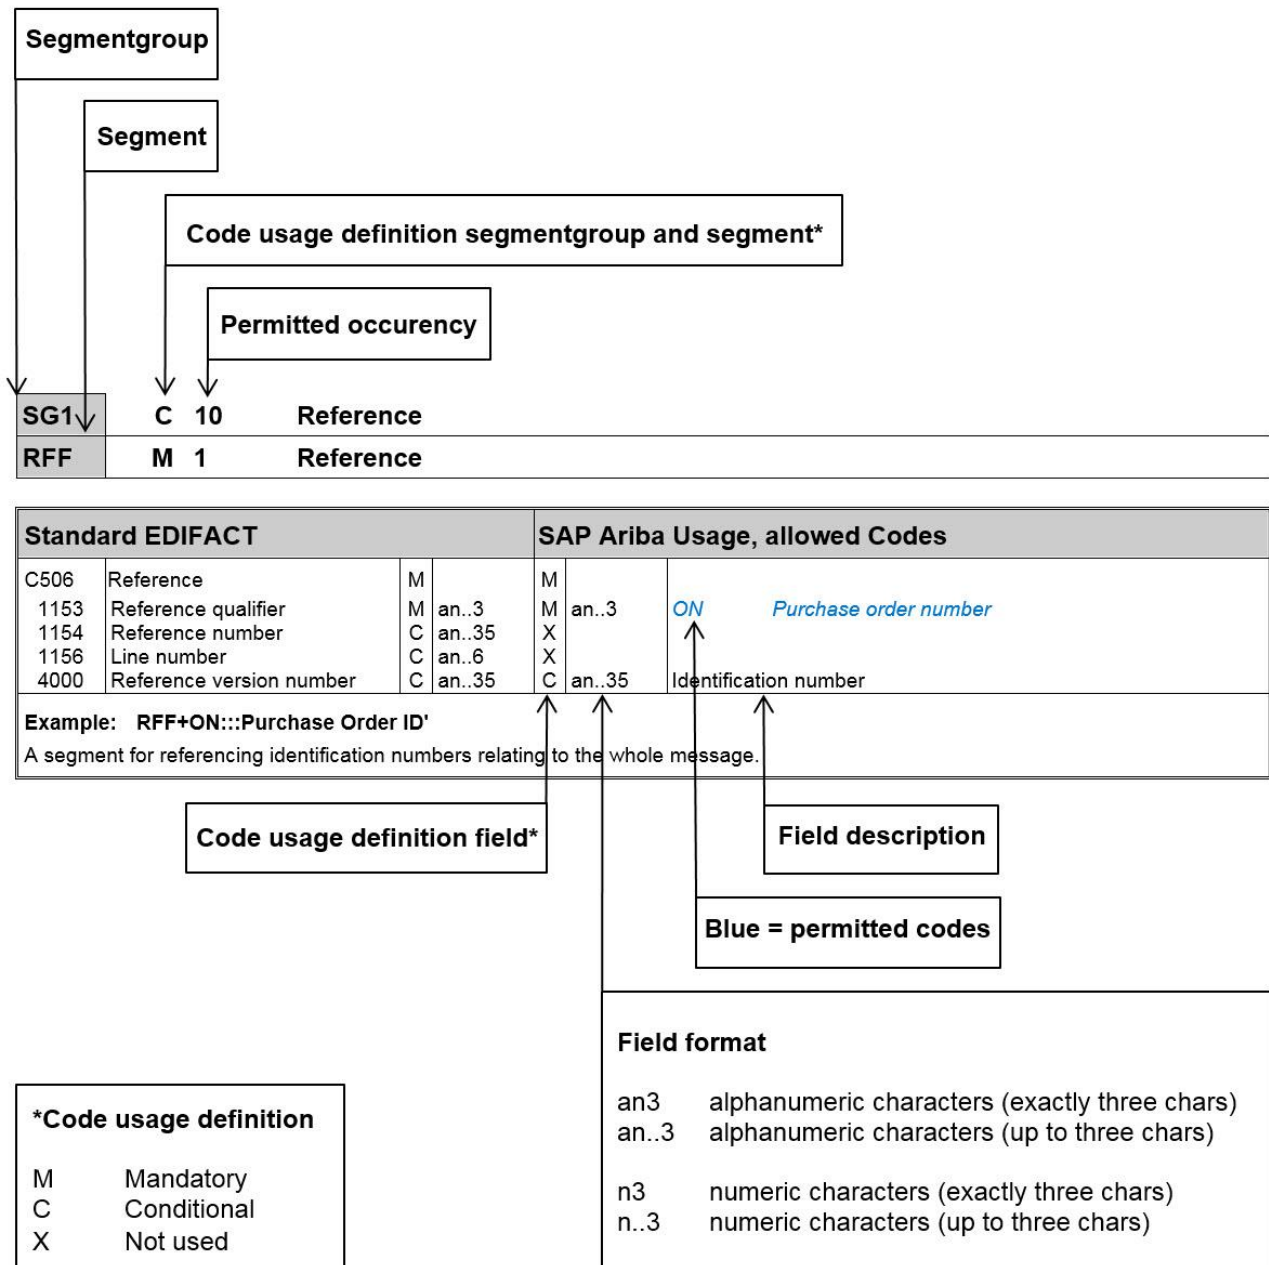

Below you will find a description of the used segments within the application and their interdependence.

| SegID | SegNo     | Name  |
|-------|-----------|---|
| UNA   | 0         | Service string advice                         |
| UNB   | 0         | Interchange Header                            |
| UNH   | 10        | Message header                                |
| BGM   | 20        | Beginning of message                          |
| DTM   | 30        | Date/Time                                     |
| FTX   | 70        | Free text                                     |
| FTX   | 70        | Free text - Rejection Reason                  |
| FTX   | 70        | Free text - Mutually defined references       |
| SG1   | LOOP 80   | Reference                                     |
| RFF   | 90        | Reference                                     |

**Example: UNB+UNOC:3+SenderID:ZZZ+ReceiverID:ZZZ+160104:0930+1+++++1'**

To start, identify and specify an interchange.

This Guideline describes the content of one message from UNH-UNT.

Please note that Ariba Network supports multi-message handling along with more than UNH-UNT per UNB-UNZ loop.

Example:

UNB+UNOC:3+SenderID:14+ReceiverID:14+160111:1314+1+++++1'

UNH+1...'

...

UNT+...+1'

UNH+2...'

...

UNT+...+2'

UNZ+2+1'

**UNH**      **M 1**      **Message header**

**Example: FTX+ZZZ+++MutuallyDefinedIDName:Mutually defined identification'**

A segment with free text information, in coded or clear form, used when additional information is needed but cannot be accommodated within other segments.

FTX+ZZZ contains information mutually defined by the trading partner. In this case the first occurrence of 4440 is used as identification name to specify the mutually defined usage provided in following 4440 element(s).

If the identification to be provided exceed the maximum field length of 70 characters, element 4440 can be repeated. The identification is then chained in the network.

**Example: NAD+BT+Bill to ID::92+Bill to Name+Bill to AddrName+Bill to Street+Bill to City+IL+ZIP+FR'**

A segment identifying names and addresses of the parties, in coded or clear form and their functions relevant to the order response.

Note that only the Name (C058/3124) is actually required.

If the name to be provided exceed the maximum field length of 35 characters, element 3036 can be repeated. The name is then chained in the network.

The postal address is optional.

If any element from a postal address (NAD C080 - NAD 3207) is being provided, then street (C059/3042), city (3164) and the two-char ISO-3166 country code (3207) are all required and become mandatory.

If the country code (3207) is US or CA, then the country-sub-entity (3229) is also required and must be a valid state or province digraph.

Within a postal address, party name (C080/3036) is supposed to represent specific recipient name(s) of a package or envelope. This may also include intra-office routing information, such as a department, a floor, office, or cube number.

Use of party name (C080/3036) is entirely optional.

**Example: ALC+C+++FC::Description 1:Description 2'**

A segment identifying the charge or allowance and, where necessary, its calculation sequence.

In this example, a 10% allowance represents a price change of 9.90 Euros.

Original price: 99.00 Euro

Deducted price: 89.10 Euro

ALC+A++++ACA::Description 1:Description 2'

DTM+194:20160101:102'

DTM+206:20160201:102'

PCD+3:10:13'

MOA+98:99.00:EUR:9'

MOA+4:89.10:EUR:9'

In this example, a 8% volume discount representing 80.00 Euros is being offered.

ALC+A++++VAB::Description 1:Description 2'

DTM+194:20160101:102'

DTM+206:20160201:102'

PCD+3:8:13'

MOA+8:80.00:EUR:9'

In this example, a 10% freight fee representing 120.00 Euros is being charged.

ALC+C+++FC::Freight-Charge-Description 1:Freight-Charge-Description 2'

MOA+8:120.00:EUR:9'

If the special service description to be provided exceed the maximum field length of 35 characters, element 7160 can be repeated. The description is then chained in the network.

**PIA C 25 Additional product id**

**Example: PIA+1+EAN Part ID:EN+Supplemental Part ID:VS+European Waste ID:ZZZ+unspsc:CC+Supplier Batch:NB'**

To specify additional or substitutional item identification codes.

It is not necessary to echo all identification numbers from the ORDERS. This segment is used to supplement the information from the ORDERS with optional information filled in by the supplier.

PIA 4347 = 1 (additional information) should only be used with:

PIA C212/4143 = CC (Classification)

PIA C212/4143 = EN (EAN number)

PIA C212/4143 = NB (Supplier batch number)

PIA C212/4143 = VS (Suppliers supplemental item number)

PIA C212/4143 = ZZZ (European waste catalog number)

PIA 4347 = 5 (product information) should only be used with:

PIA C212/4143 = BP (Buyers part number)

PIA C212/4143 = MF (Manufacturers article number)

Example:

PIA+5+Buyer Part ID:BP+Manufacturer Part ID:MF'

PIA+1+Supplier Supplemental Part ID:VS+EAN ID:EN+Class:CC'

Commodity classification of the service (CC)

Typically lists the UNSPSC (United Nations Standard Products and Services Code) commodity code for each selected item. These codes are used by backend systems within buyer and supplier organizations for accounting and report generation. For the list of UNSPSC codes, see [www.unspsc.org](http://www.unspsc.org).

If custom classifications are required, please use CCI Characteristic/class id segment.

**Example: CCI+++custom:::5136030000'**

A segment to identify product characteristic and, or the characteristic name and characteristic relevance for the business process.

Typically lists the UNSPSC (United Nations Standard Products and Services Code) commodity code for each selected item. These codes are used by backend systems within buyer and supplier organizations for accounting and report generation. For the list of UNSPSC codes, see [www.unspsc.org](http://www.unspsc.org).

UNSPSC classifications are also supported at additional product id segment (PIA/C212/7143="CC").

If custom classifications are required, please use CCI Characteristic/class id segment.

Example:  
CCI+++UNSPSC:::5136030000'  
CCI+++custom:::12345'

**Example: PRI+CAL:::CUP:100:C62'**

A segment to specify the price type and amount. The price used for the calculation of the line amount will be identified as 'Price'.

PRI/C509/5387="CUP" is used to show a confirmed unit price and should be used only when there is a part number change.

PRI/C509/5387="AAK" is used here to show a changed unit price.

The value would be expected to be different from PRI/C509/5125="AAA" provided on the purchase order.

**Example: NAD+ST+Ship to ID::9+Ship to Name+Ship to AddrName+Ship to Street 1+Ship to City+TX+ZIP+US'**

A segment identifying names and addresses of the parties, in coded or clear form, and their functions relevant to the order.

Note that only the Name (C058/3124) is actually required.

If the name to be provided exceed the maximum field length of 35 characters, element 3036 can be repeated. The name is then chained in the network.

The postal address is optional.

If any element from a postal address (NAD C080 - NAD 3207) is being provided, then street (C059/3042), city (3164) and the two-char ISO-3166 country code (3207) are all required and become mandatory.

If the country code (3207) is US or CA, then the country-sub-entity (3229) is also required and must be a valid state or province digraph.

Within a postal address, party name (C080/3036) is supposed to represent specific recipient name(s) of a package or envelope. This may also include intra-office routing information, such as a department, a floor, office, or cube number.

Use of party name (C080/3036) is entirely optional.

**ALC**

**M 1**

**Allowance or charge**

**Example: ALC+A++++ACA::Description 1:Description 2'**

A segment identifying the charge or allowance and, where necessary, its calculation sequence.

In this example, a 10% allowance represents a price change of 9.90 Euros.

Original price: 99.00 Euro

Deducted price: 89.10 Euro

ALC+A++++ACA::Description 1:Description 2'

DTM+194:20160101:102'

DTM+206:20160201:102'

PCD+3:10:13'

MOA+98:99.00:EUR:9'

MOA+4:89.10:EUR:9'

In this example, a 8% volume discount representing 80.00 Euros is being offered.

ALC+A++++VAB::Description 1:Description 2'

DTM+194:20160101:102'

DTM+206:20160201:102'

PCD+3:8:13'

MOA+8:80.00:EUR:9'

In this example, a 10% freight fee representing 120.00 Euros is being charged.

ALC+C++++FC::Freight-Charge-Description 1:Freight-Charge-Description 2'

MOA+8:120.00:EUR:9'

If the special service description to be provided exceed the maximum field length of 35 characters, element 7160 can be repeated.  
The description is then chained in the network.

**Example: DTM+194:20160101:102'**

A segment specifying the date/time related to the allowance or charge.

Date/Time Note:

Note that a complete date/time/zone is recommended. Otherwise it will be automatically calculated and might lead to wrong data. Timestamps in cXML are represented as a date with a time, and an offset to UTC.

If you do not specify a time, it will be taken as noon (12:00) on the date specified.

If you do not specify the time code (zone), then it will be defaulted to UTC (+00:00).

**Example: FTX+AAI+++General Information Text+EN'**

A segment with free text information, in coded or clear form, used when additional information is needed but cannot be accommodated within other segments. In computer to computer exchanges such text will normally require the receiver to process this segment manually.

Use FTX+AAI for general comments.

If the text to be provided exceed the maximum field length of 70 characters, element 4440 can be repeated. The text is then chained in the network.

**Example: FTX+ZZZ+++MutuallyDefinedIDName:Mutually defined identification'**

A segment with free text information, in coded or clear form, used when additional information is needed but cannot be accommodated within other segments. In computer to computer exchanges such text will normally require the receiver to process this segment manually.

FTX+ZZZ contains information mutually defined by the trading partner. In this case the first occurrence of 4440 is used as identification name to specify the mutually defined usage provided in following 4440 element(s).

If the identification to be provided exceed the maximum field length of 70 characters, element 4440 can be repeated. The identification is then chained in the network.

## **APPENDIX – BRANCHING DIAGRAM**

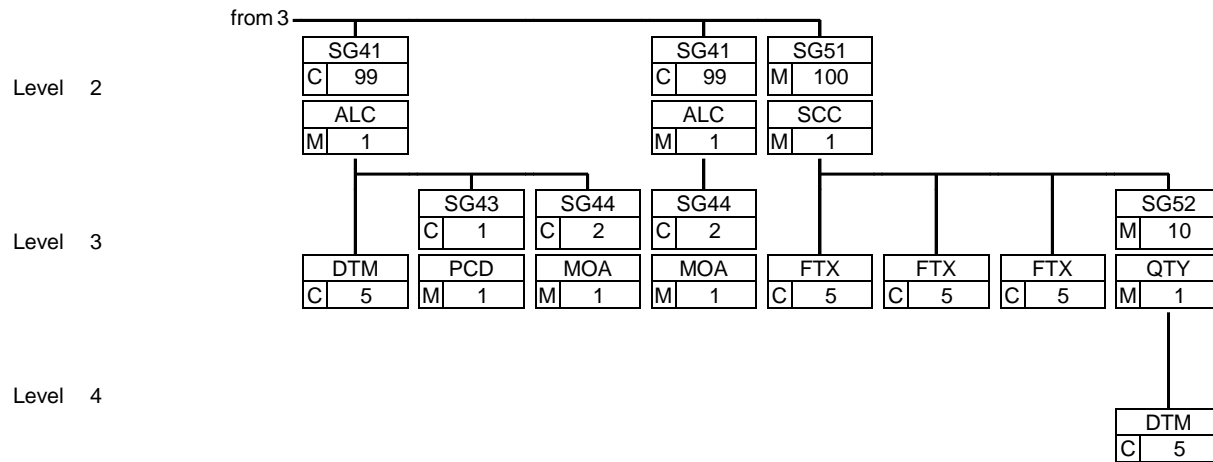

Below you will find a branching diagram for the message which graphically outlines the hierarchical structure and the interdependence between the different segments.

**APPENDIX – CODELISTS****2379 Date/time/period format qualifier**

The following codes are supported.

|     |                   |   |
|-----|-------------------|---|
| 102 | CCYYMMDD          | Calendar date                             |
| 203 | CCYYMMDDHHMM      | Calendar date including time with minutes |
| 204 | CCYYMMDDHHMMSS    | Calendar date including time with seconds |
| 303 | CCYYMMDDHHMMZZZ   | See 203 plus time zone (ZZZ)              |
| 304 | CCYYMMDDHHMMSSZZZ | See 204 plus time zone (ZZZ)              |

C=Century; Y=Year; M=Month; D=Day; H=Hour; M=Minute; S=Second; Z=Timezone

Note that a complete date/time/zone is recommended. If you do not specify a time, it may be taken as midnight on the date specified. If you do not specify a time zone, then it will be defaulted to GMT.

The recommended codes for time zones (the ZZZ part) are to use the ISO-8601 codes +nn, -nn. However, since + is a restricted character, Pnn and Mnn codes are implemented to specify the hour offset from UTC. P = Plus, M = Minus.

P01 = +01:00, P02 = +02:00 ... M01 = -01:00, M02 = -02:00, etc.

P00 = +00:00, M00 = -00:00, GMT = UT = +00:00

P12 = +12:00, M12 = -12:00, though they are equivalent.

## APPENDIX – SPECIAL USAGE OF SOME EDIFACT GROUPS / SEGMENTS / DATAELEMENTS

| SegNo | Seg ID                     | Element ID | Code / Field Description         |
|-------|----------------------------|------------|----------------------------------|
| 2040  | SG25/LIN/SG51/SCC/SG52/QTY | 6063       | <i>194 = accepted quantity</i>   |
|       |                            | 6060       | Quantity, which accepted         |
|       |                            | 6411       | Unit of measure                  |
|       |                            | 6063       | <i>185 = rejected quantity</i>   |
|       |                            | 6060       | Quantity, which rejected         |
|       |                            | 6411       | Unit of measure                  |
|       |                            | 6063       | <i>83 = backordered quantity</i> |
|       |                            | 6060       | Quantity, which backordered      |
|       |                            | 6411       | Unit of measure                  |

QTY+194/185/83 is syntactical correct but schema uncommon.

**Ariba Network defines the required confirmation status type “accepted” / “backordered” / “rejected” by validating the quantity code qualifier QTY/6063 = 194 / 83 / 185 due to D96A limitation (neither LIN/1229 action/request code for “backordered” available nor SCC/4017 code for “reject” or “backorder” available).**

EMEA/APJ common usage of an action code / confirmation status type and the related quantity:

Quantity “accepted” - Schema 1:

SG25/LIN/1229 = 5 for action code “accepted without amendments”

SG25/QTY+113 for “quantity to be delivered” (if the quantity is accepted)

LIN++5'

QTY+21:100' - ordered

QTY+113:100' – to be delivered

Quantity “accepted” - Schema 2 via Scheduling Conditions:

SG25/LIN/1229 = 5 for action code “accepted without amendments”

SG25/LIN/SG51/SCC/4017 = 1 for delivery plan status code “firm”

SG25/SG51/SG52/QTY+113 for “quantity to be delivered” (if the quantity is accepted)

LIN++5'

QTY+21:100' - ordered

SCC+1'

QTY+113:100' – to be delivered

Quantity “backordered” - Schema 1:

SG25/LIN/1229 = 6 for action code “accepted with amendments”

SG25/QTY+83 for “backordered quantity” (if the quantity is accepted, but cannot delivered on time)

LIN++6'

QTY+21:100' - ordered

QTY+113:90' – to be delivered

QTY+83:10' - backordered

Quantity “backordered” - Schema 2 via Scheduling Conditions:

SG25/LIN/1229 = 6 for action code “accepted with amendments”

SG25/QTY+83 for “backordered quantity” (if the quantity is accepted, but cannot delivered on time)

LIN++6'

QTY+21:100' - ordered

QTY+83:10' - backordered

SCC+1'

QTY+113:90' – to be delivered

Quantity “rejected”:

SG25/LIN/1229 = 7 for action code “not accepted”

The rejected quantity is not used.

LIN++7'

QTY+21:100' - ordered
