# Agenda

Webcast logistics and general release information

## Key Feature Discussions

- APIs
- Cloud Integration
  - Overview
    - ✓ CIG High Level Architecture
    - ✓ Standard OOTB (Out Of The Box) Integrations
    - ✓ SAP Ariba Cloud Integration Gateway Adoption
    - ✓ CIG Community
  - CIG Release 2205: CIG AddOn Support Packs
  - New Features: CIG Core (Platform & Portal)
  - New Features: Ariba Network Buyer Integration
  - New Features: Intelligent Enterprise Source To Pay Integration (IES S2P)

## Reminders

# Logistics

## During the session, demonstration / video access

- If not already visible when the speaker starts video playback, click the Media Player button on the bottom of the screen to see the video.
- The Media Player window may be “hidden” behind other windows if you have multiple open

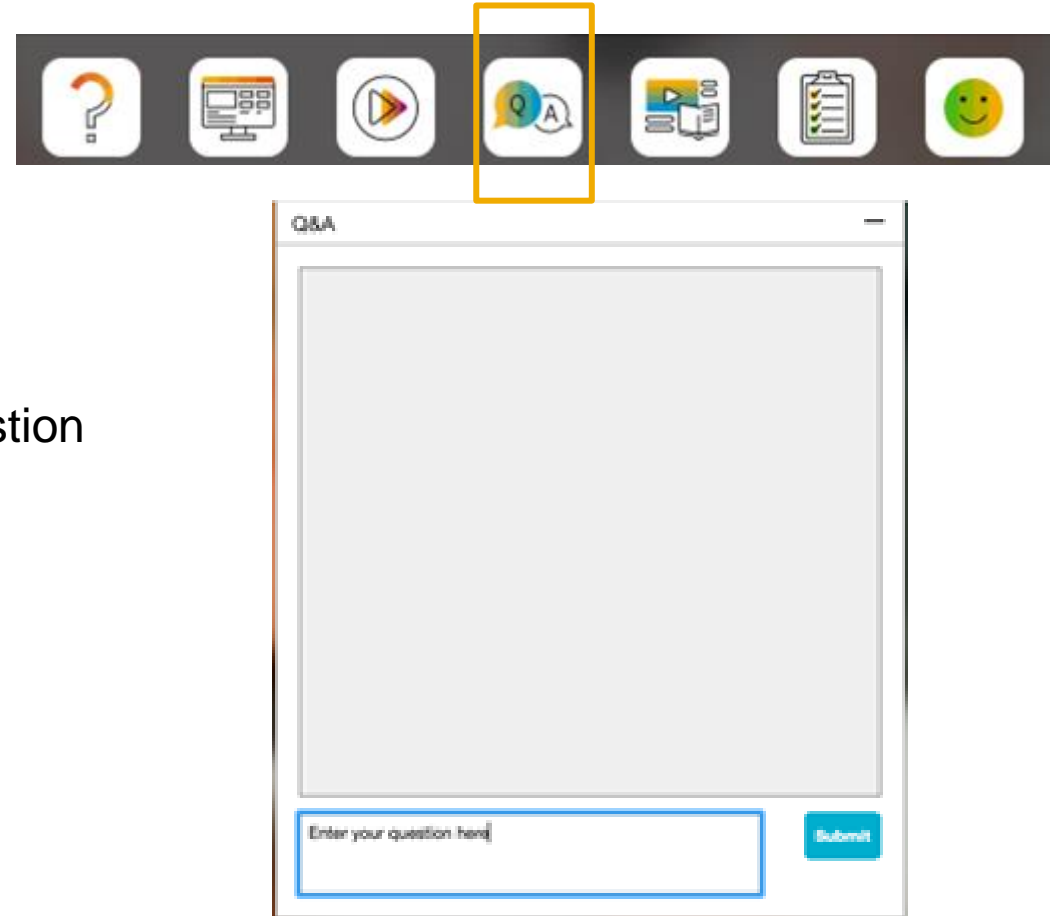

# Logistics

## To Ask a Question, please use the ON24 Q & A Panel

- If not already visible, click the Q&A button at the bottom of the screen.
- Type your question in the “Enter your question here” area.
- Click Submit.

The Presenter and/or Panelists will attempt to answer your question online or via the audio feed as close to the time the question is asked as possible.

# Logistics

**To view resources, please use the button noted**

- If not already visible, click the Resources button
- A variety of links directly to content associated with features from the release will appear

Resources

SAP Ariba  **Release Readiness** **Resources**

- [SAP Ariba Release Readiness Portal](#) - Replays, presentations, feature list for the upcoming release.
- ["What's new" guide on SAP Help Portal](#) - Documentations, including features from the past releases.
- [Webcast FAQ](#) - Q&A related to webcast session requirements and troubleshooting.
- [SAP Roadmaps](#) - Find out some of the key features in the upcoming releases.

# Logistics

## At the end of the session, provide Survey feedback

- If not already visible, click the Survey button at the bottom of the screen.
- Answer the questions posed.
- Click Submit.

Your feedback is used to continually improve our customer engagement activities for our quarterly product releases.

Thank you for taking the time to share your thoughts with our team!

Survey

---

Event Survey

Your feedback is greatly appreciated. We review every response in order to make continuous improvements to these presentations.

1. How strongly would you recommend this webcast to your peers?

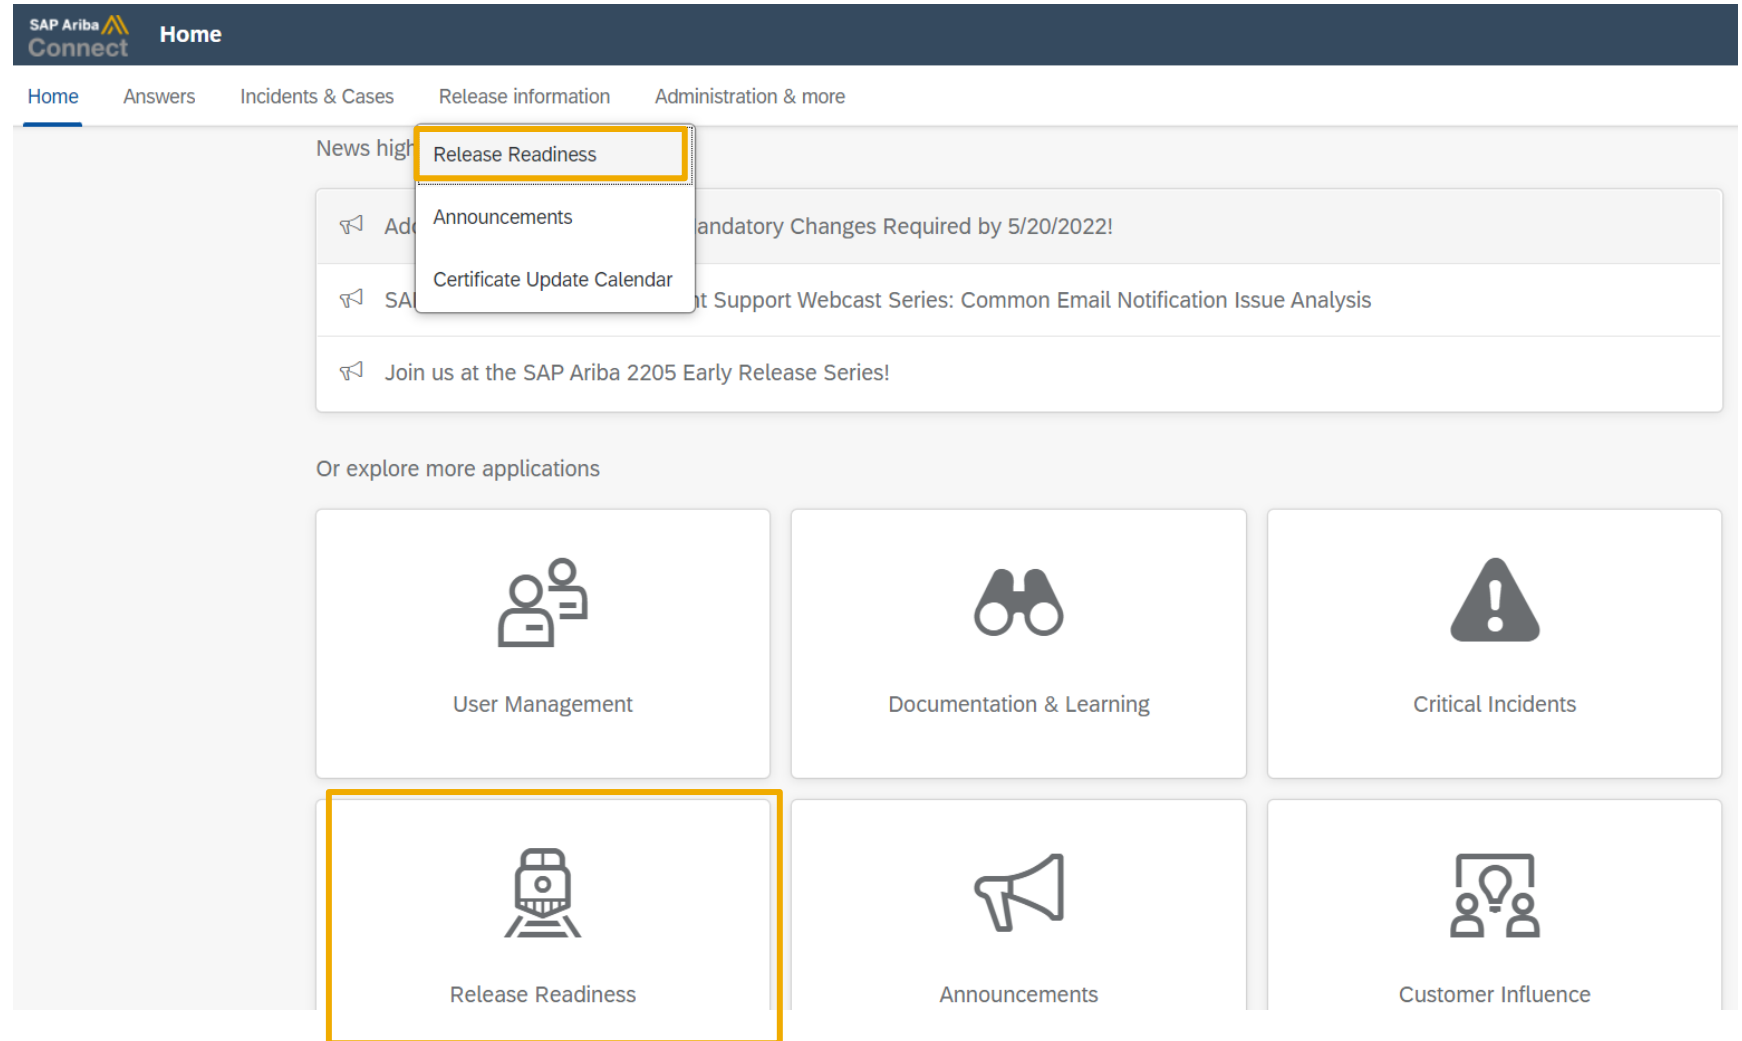

Select a Choice

---

2. Provide any comments you have regarding these sessions or the release materials:

# General Information **Session Materials**

- SAP Ariba Connect user interface
- Multiple routes for launching the Release Readiness page
- Access to product announcements also available

# General Information **Session Materials**

Scroll through to see full list of features, documentation links, release schedules, and archived information from prior releases.

Release Readiness

[Have a question?](#)

## **SAP Ariba Release Readiness**

Welcome to the SAP Ariba Release Readiness portal - a central location to get up-to-date information and materials to help you prepare for upcoming releases.

The *ReCAPTCHA verification for the external supplier request* [SM-26592] introduced with the 2202 SAP Ariba release is now available in all data centers.

### **2205 Release Resources**

Review the [Feature List](#). Includes brief descriptions, enablement model, and access to available KT and demos.

Discover the benefits coming with this release with the [Release Highlights](#).

The [Release Summary](#) provides a downloadable overview of planned features with links to additional feature content.

The [What's New in SAP Ariba](#) guide provides full details on each feature.

# APIs

## Planned Key Features

# Planned Features

## APIs

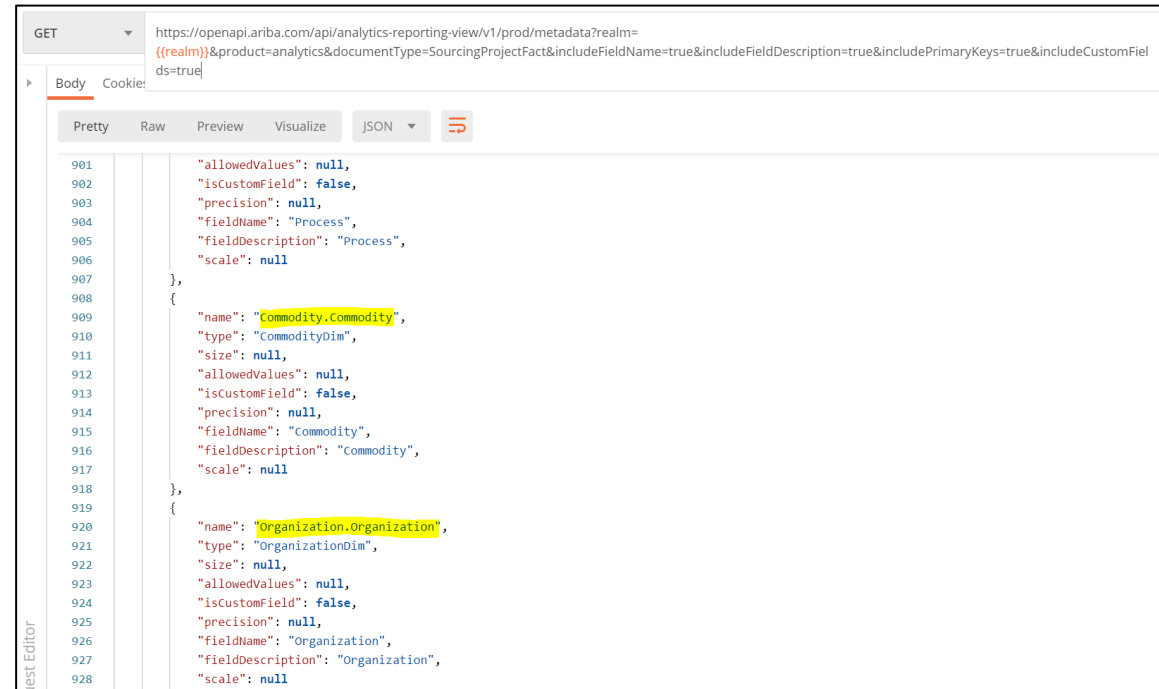

1. **Analytical Reporting API Speed and Throughput Enhancement [ARE-7764]**
2. **Enhancements to Supplier Invite API [NS-12954]**

# Feature at a Glance

## Introducing: Analytical Reporting API Speed and Throughput Enhancement

### Detailed feature information

- The ASYNC Analytical Reporting API output depends on whether the view contains vector or non-vector fields.
- If the view has a vector field, it will deliver a maximum of 5,000 records. If there are no vector fields in the view, then it will deliver a maximum of 50,000 records per zip file.
- Vector fields can be identified by format “field.field” in the **selectFields** section of the Metadata API response, as highlighted here.
- SourcingProjectFact vector fields are highlighted in this example. If you use the SourcingProjectFactSystemView template you will get the vector fields and the standard 5,000 records per zip file for your ASYNC call. If the vector fields are not needed, and you wish to boost performance, then create a custom view without these fields.

```

# Feature at a Glance

## Introducing: Analytical Reporting API Speed and Throughput Enhancement Maximum record count per page and per file in non-vector analytical reporting API request

Parameters Save Cancel

The search field is case-insensitive and you can enter all or part of a parameter name or value.

**Search Filters:**

Parameter Name or Value:  Search List All

Parameter	Value	Default Value		
Application.Analysis.ReportingDataAPI.MaxRecordCountPerFile	<input type="text" value="45000"/>	5000	Reset	Details
Application.Analysis.ReportingDataAPI.MaxRecordCountPerPage	<input type="text" value="400000"/>	50000	Reset	Details

- **Application.Analysis.ReportingDataAPI.MaxRecordCountPerFile** parameter specifies the maximum number of records saved in one ZIP file for a non-vector analytical reporting API request.
  - Default is 5,000
  - Range for the parameter is between 1,000 and 50,000
  - Customers can increase the value up to 50,000 to improve the speed and throughput of non-vector analytical reporting API requests
- **Application.Analysis.ReportingDataAPI.MaxRecordCountPerPage** parameter specifies the maximum number of records per page that can be requested per non-vector analytical reporting API request.
  - Default is 50,000
  - Range for the parameter is between 10,000 and 500,000
  - Customers can increase the value up to 500,000 to improve the speed and throughput of non-vector analytical reporting API requests

ID	Application.Analysis.ReportingDataAPI.MaxRecordCountPerFile
Name	<b>Maximum record count per file in non-vector analytical reporting API request</b>
Default value	5000

ID	Application.Analysis.ReportingDataAPI.MaxRecordCountPerPage
Name	<b>Maximum record count per page in non-vector analytical reporting API request</b>
Default value	50000

## Feature at a Glance

### Introducing: Analytical Reporting API Speed and Throughput Enhancement

Performance Impact – 10x or more\*

Analytical reporting API mode	Number of records to extract	Number of pages needed (jobs)	Number of zip files to download	Time to extract all data
				With standard rate limits (submit up to 8 jobs per hour and up to 40 jobs per day)
<b>Before:</b> Existing performance	10M	200	2000	5 days
<b>After:</b> With feature toggle enabled and parameters set to 500K records per page and 50k records per file	10M	20	200	5 hours

\* Example improvement seen in testing. Improvement may vary based on customer configuration and landscape

## Feature at a Glance

# Introducing: Analytical Reporting API Speed and Throughput Enhancement

Pagination allows greater throughput

- When the response to an asynchronous reporting API call contains greater than the system maximum records, all records can still be retrieved with pagination.
- Records in the results set are separated into pages, with each page containing 50,000 records, and each page can be requested in a separate API call.
- The pagination feature must be used when more than 50,000 records are included in order to retrieve all records via API.
- Customers will be provided a page token that can be used to submit a job to get the next page (in case the number of records are more than a single page size).
- The response to each API call contains the one page of records, a page token that can be passed in the next query to retrieve the next page of records, and several new fields to help navigate and enumerate the results set.
- In addition, the reporting API result response will also contain a summary of the total number of records like number of pages, number of files to be downloaded, number of records, current page, etc.
- Pagination is supported for SYNC APIs as well and they follow the same record count limits as Async APIs. Current changes of reading the new ICM parameter are made only for non-vector Analytical Async APIs. All other reporting APIs still read the system parameter
  - System.ReportingDataAPI.MaxRecordsPerFile
  - System.ReportingDataAPI.MaxRecordsPerRequest
- More details on pagination available in the [SAP Ariba Applications Q4 2019 release guide](#).

# Feature at a Glance

## Introducing: Analytical Reporting API Speed and Throughput Enhancement

### Pulling data via API using pagination

- Once you are authorized, you may submit a job to retrieve the desired information
  - Image shows user specifying all invoices from Jan 1, 2021 (A) – Dec 31, 2021 (B)
- Once pull is done processing, the list of zip files containing the requested records is shown.

```

## Feature at a Glance

# Introducing: Analytical Reporting API Speed and Throughput Enhancement

## Pulling data via API using pagination

- At the end of the API processing information, some key information is shared:
  - “pageToken” – used for requesting subsequent pages in the pull (see next slide)
  - “totalNumOfRecords” – total records pulled – 12,694,443
  - “currentPageRecordsCount” – indicates the max limit of 500,000 as described on slide 4
  - “totalNumOfPages” – indicates a total of 26 pages were pulled
  - “currentPageNum” – indicates where you are in the pulling of pages. Once that number reaches 26, you’re at the end
  - “totalNumOfFiles” – indicates the total number of zip files pulled across the 26 pages
- Once each zip file is downloaded, you can continue on by requesting the next page as shown in the following slide.

```
131     "debug": false,  
132     "emitNull": true,  
133     "displayStateString": false,  
134     "includeInactive": false,  
135     "reportingApp": null,  
136     "pageToken": "QUVOT0FJbERxbjYzeFQ0",  
137     "totalNumOfRecords": 12694443,  
138     "currentPageRecordsCount": 500000,  
139     "totalNumOfPages": 26,  
140     "currentPageNum": 1,  
141     "totalNumOfFiles": 254,  
142     "filesInCurrentPage": 10,  
143     "requestId": null  
144 )
```

## Feature at a Glance

# Introducing: Analytical Reporting API Speed and Throughput Enhancement

## Pulling data via API using pagination

- Using the page token (A) shown on the prior slide, you can submit the next analytical reporting API job, copying and pasting the page token, in a new POST call (B) and sending.

```
131     "debug": false,  
132     "emitNull": true,  
133     "displayStateString": false,  
134     "includeInactive": false,  
135     "reportingApp": null,  
136     "pageToken": "QUVOT0FJbERxbjYzeFQ0",  
137     "totalNumOfRecords": 12694443,  
138     "currentPageRecordsCount": 500000,  
139     "totalNumOfPages": 26,  
140     "currentPageNum": 1,  
141     "totalNumOfFiles": 254,  
142     "filesInCurrentPage": 10,  
143     "requestId": null  
144 }
```

# Feature at a Glance

## Introducing: Analytical Reporting API Speed and Throughput Enhancement

### Toggle and Parameters

- By selecting Enable in the top left image, the feature will become visible.
- After selecting Enable, users may search for realms and add.
- Please note:
  - The toggle is only used before release to allow customers to access for Early Adopter Care.
  - Once released, the toggle will be on for all customers and will no longer be necessary to configure.

# Feature at a Glance

## Introducing: Analytical Reporting API Speed and Throughput Enhancement

### Enablement

#### Feature Toggle:

id = "ARE-7764"

name = "Analytical Reporting API - Phase 1 - Faster extraction for non-vector facts/dims"

#### ICM Parameters:

```
<parameter name="Application.Analysis.ReportingDataAPI.MaxRecordCountPerPage" type="int" defaultValue="50000" minVal="10000" maxVal="500000"
acl="selfservice">
  <description>
    <![CDATA[<P>This section defines the max records that can be requested per non-vector analytical reporting API request</P>]]>
  </description>
</parameter>
```

```
<parameter name="Application.Analysis.ReportingDataAPI.MaxRecordCountPerFile" type="int" defaultValue="5000" minVal="1000" maxVal="50000"
acl="selfservice">
  <description>
    <![CDATA[<P>This section defines the max records saved in one file for non-vector analytical reporting API request</P>]]>
  </description>
</parameter>
```

## CIG Release and CIG AddOn Support Packs

# CIG Release 2205: AddOn Components & Support Packs

CIG Buyer AddOn for <b>SAP ERP</b>	
ABAP component	Support Pack
ARBCI1 100	SP17
ARBCI2 100	SP11*
ARBCIGR 100	SP1*

CIG <b>Supplier AddOn</b> for SAP ERP	
ABAP component	Support Pack
ARBCIS 100	SP04*

CIG Buyer AddOn for <b>S/4 HANA</b>	
ABAP component	Support Pack
ARBCI1 10S	SP17
ARBCI2 10S	SP11*
ARBCIGR 10S	SP1*

\* No change from previous CIG AddOn SP

## CIG AddOn: Change to Release cadence

- ❑ Effective current release, CIG AddOn release is changing to **2 times a year** with **May & November** quarterly release (currently, AddOn is released 4 times a year)
- ❑ It provides customers more effective time to adopt, prior to upgrade to next Support Pack
- ❑ AddOn Support policy will continue with N & N-1 SP version. New cadence will provide customers 1 full year of supportability for CIG
- ❑ Features that are independent of AddOn e.g. CIG Platform, CIG Portal and API based integration for S/4 HANA, will continue the same cadence (4 times a year, every quarter, in February, May, August & November)

# Cloud Integration

## New Features: CIG Core (Platform & Portal)

# New Features: CIG Core

- **IG-35649** Enhancements to the mapping tool to support additional logical operators for mapping and grouping of multiple conditions
- **IG-35650** Integration support to configure test environment host names for SAP Fieldglass tenants of the buyer

# IG-35649 Enhancements to the mapping tool to support additional logical operators for mapping and grouping of multiple conditions

## Customer Challenge

- Our mapping tool today allows users to apply source or target conditions when performing the mapping. However, for the mapping to happen, all the conditions chosen should always satisfy since the underlying operator was defaulted to 'AND'. Grouping of conditions were also not allowed.

## Solution

New mapping tool enhancements introduced include -

- Enable the user to combine conditions with AND or OR.
- Enable the user to negate condition elements or even groups
- Allowing the users to group more than two conditions using operator other than 'AND'.
- Enable the user to create complex expression by allowing them to create simple connections between two condition elements or even groups.

By using these recursively they can be used to mirror complex expressions.

## Key Benefits

User's will be able to access additional mapping feature functionality via the tool to build their custom maps that fits their business needs. Decision making logic for performing a mapping can be defined by users through UI.

# IG-35649 Enhancements to the mapping tool to support additional logical operators for mapping and grouping of multiple conditions

## Conditions

Source Conditions, Context XPath:

/ARBCIG\_ORDERS/IDOC/EDI\_DC40/MANDT

Source Conditions, Full Context XPath:

/ARBCIG\_ORDERS/IDOC/EDI\_DC40/MANDT[(contains(normalize-space(./text()),'Test') and ../STATUS='approved') or (contains(normalize-space(./text()),'Test') and contains(../TEST,'true'))]

Identifier	Condition XPath	Type	Operator	Modifier	Co...	Action
C1	/ARBCIG_ORDERS/IDOC/EDI_DC40/MANDT	VALUE	CONTAINS	normalize-space	Test	
C2	/ARBCIG_ORDERS/IDOC/EDI_DC40/STATUS	VALUE	EQUALS		ap...	
C3	/ARBCIG_ORDERS/IDOC/EDI_DC40/TEST	VALUE	CONTAINS		true	

Source Expression	Action
((C1 and C2) or (C1 and C3))	

Target Conditions, Context XPath:

/cXML/Request/OrderRequest/OrderRequestHeader/@parentAgreementPayloadID

Target Conditions, Full Context XPath:

/cXML/Request/OrderRequest/OrderRequestHeader/@parentAgreementPayloadID

# IG-35649 Enhancements to the mapping tool to support additional logical operators for mapping and grouping of multiple conditions

Condition Expression

(  NOT  )  AND  OR  NOT  )

Expression  
((C1 and C2) or (C1 and C3))

Groups (3/10)

Group	Expression	Expression
G1	(C1 AND C2)	<input checked="" type="checkbox"/> <input type="checkbox"/>
G2	(C1 AND C3)	<input checked="" type="checkbox"/> <input type="checkbox"/>
G3	(G1 OR G2)	<input checked="" type="checkbox"/> <input type="checkbox"/>
		<input checked="" type="checkbox"/> <input type="checkbox"/>
		<input checked="" type="checkbox"/> <input type="checkbox"/>

# IG-35650 Integration support to configure test environment host names for SAP Fieldglass tenants of the buyer

## Customer Challenge

The Service Procurement Integration (4r2) was introduced as part of CIG in 2105. The integration flow allows Buyers the combinational benefit of Invoicing capabilities of Ariba Network and Service Procurement capabilities of Fieldglass.

Fieldglass application has multiple test environments. Each environment may house multiple Buyer tenants. Buyers can choose to test their integration with any of these environments. However, Buyers did not have a way to configure the URL for their Fieldglass test tenant as a self-service. Additionally, Buyers could not see the flow of documents on CIG Tracker.

## Solution

The enhancement that are targeted via this feature include-

- **Ability to configure TEST URL for Fieldglass:** CIG will allow user(buyer) to configure the test end points for Fieldglass with the ability to edit the endpoints as and when needed.
- **Visibility of Transactions:** Transactions going from Ariba Network to Fieldglass will be visible to Buyers.

## Key Benefits

Buyers can choose the TEST tenant where they want to test their Fieldglass integration which is configurable via UI on CIG Portal.

Buyers can see the flow of documents between Ariba Network and Fieldglass providing more visibility and transparency in the flow.

# Cloud Integration

## New Features: Ariba Network Buyer Integration

# New Features: Ariba Network Buyer Integration

- **IG-35546** Enhancements to packaging data export integration and ship notice integration
- **IG-35946** IG-35946 Enhancements in stock transport order integration to send inventory information to Ariba Network

# IG-35546 Enhancements to packaging data export integration and ship notice integration

## Customer Challenge

- Customers did not have the ability to process packaging data export in the background making it difficult to process large volumes of data.
- In addition, packaging data exports did not support assigning parent packaging material for auxiliary packaging material. As a result, customers were not able to allow suppliers to add auxiliary packaging material at a specific packaging hierarchy while processing ship notices on Ariba Network.
- Furthermore, customers did not have ability to integrate ship notices containing empty packaging material.

## Solution

- Enhancements to packaging data export from ERP to Ariba Network
  - Additional selection criteria to filter data based on check profile, handling unit groups, creation date of packing instructions
  - enable background processing to extract packing instructions
  - include the assignment of parent packaging material to auxiliary packaging material
  - include the ERP system ID associated with the packing instructions

# IG-35546 Enhancements to packaging data export integration and ship notice integration

## Solution

- Enhancements to ship notice integration from Ariba Network to the ERP
  - support the inclusion of empty packaging material as auxiliary packaging material
  - support the inclusion of empty packaging material as handling units with zero load quantity

## Key Benefits

- This feature provides the ability for buyers to export large amounts of data and integrate ship notices containing empty packaging material either as auxiliary packaging or as empty handling units with zero load quantity.

# IG-35946 Enhancements in stock transport order integration to send inventory information to Ariba Network

## Customer Challenge

- Buyers were not able to send material inventory information from their ERP system to Ariba Network to support stock transport order collaboration processes and as a result, trading partners did not have visibility on inventory. This information is critical to ensure that trading partners submit ship notices that consume the quantity from available stock.

## Solution

- Enhancements for stock transport order integration
  - to send plant-level In-transit and Unrestricted stock from SAP ERP or SAP S/4HANA to Ariba Network
  - product activity message includes batch details and serial numbers for the Unrestricted stock (a batch or a serial number does not apply to the In-transit stock)
  - product activity message is sent to vendors assigned to the corresponding plant
  - SLG1 application log is created indicating Vendor-Plant combination to which product activity message is sent and 'not sent'

# IG-35946 Enhancements in stock transport order integration to send inventory information to Ariba Network

## Key Benefits

- Ariba Network buyers will be able to send in-transit and unrestricted stock for materials from their ERP systems to Ariba Network. With this inventory information, trading partners will be able to validate consumption of material from the available inventory.

# IG-35946 Enhancements in stock transport order integration to send inventory information to Ariba Network

## Difference for Intercompany STO vs Intracompany STO

<b>Stock Transport Order type</b>	<b>Material stock type</b>	<b>cXML field</b>
Intracompany stock transport order	Unrestricted stock	UnrestrictedUseQuantity
	Stock in transit	IntransitQuantity
Intercompany stock transport order	Unrestricted stock	UnrestrictedUseQuantity
	Stock in trans.CC	StockInTransferQuantity
