Introduction and Types
What is Punchout Catalog

Index

A **PunchOut** catalog is a type of catalogue that gives **Buyers** access a **Supplier's web-shop** from their SAP Ariba Application.

Punchout Level 1

When referred to a "**Level 1**", this means the **Buyer** searches for the desired Supplier/PunchOut and then enters at the Store Level, i.e. they are sent to the web-shop's landing page. On entering, the **Buyer** will **search for the Items on the Supplier's web-shop**, then add all desired items to the web-shop's Basket and return back to the SAP Ariba Application with the Basket containing the selected Items to generate Purchase Requisition.

Punchout Level 2

When referred to a "**Level 2**", this means the **Buyer** is entering at the Aisle, Shelf or Product Level, i.e. they are sent to a specific part of a web-shop. On entering, the Buyer will be **sent directly to the Aisle/Shelf/Product that he clicked on when browsing his SAP Ariba Application's UI**. Once he has added the desired items to the web-shop's Basket, the **Buyer** returns back to the SAP Ariba application with the Basket containing the selected Items to generate Purchase Requisition.

Project Specifics

Main Prerequisites for Punchout Suppliers

Index
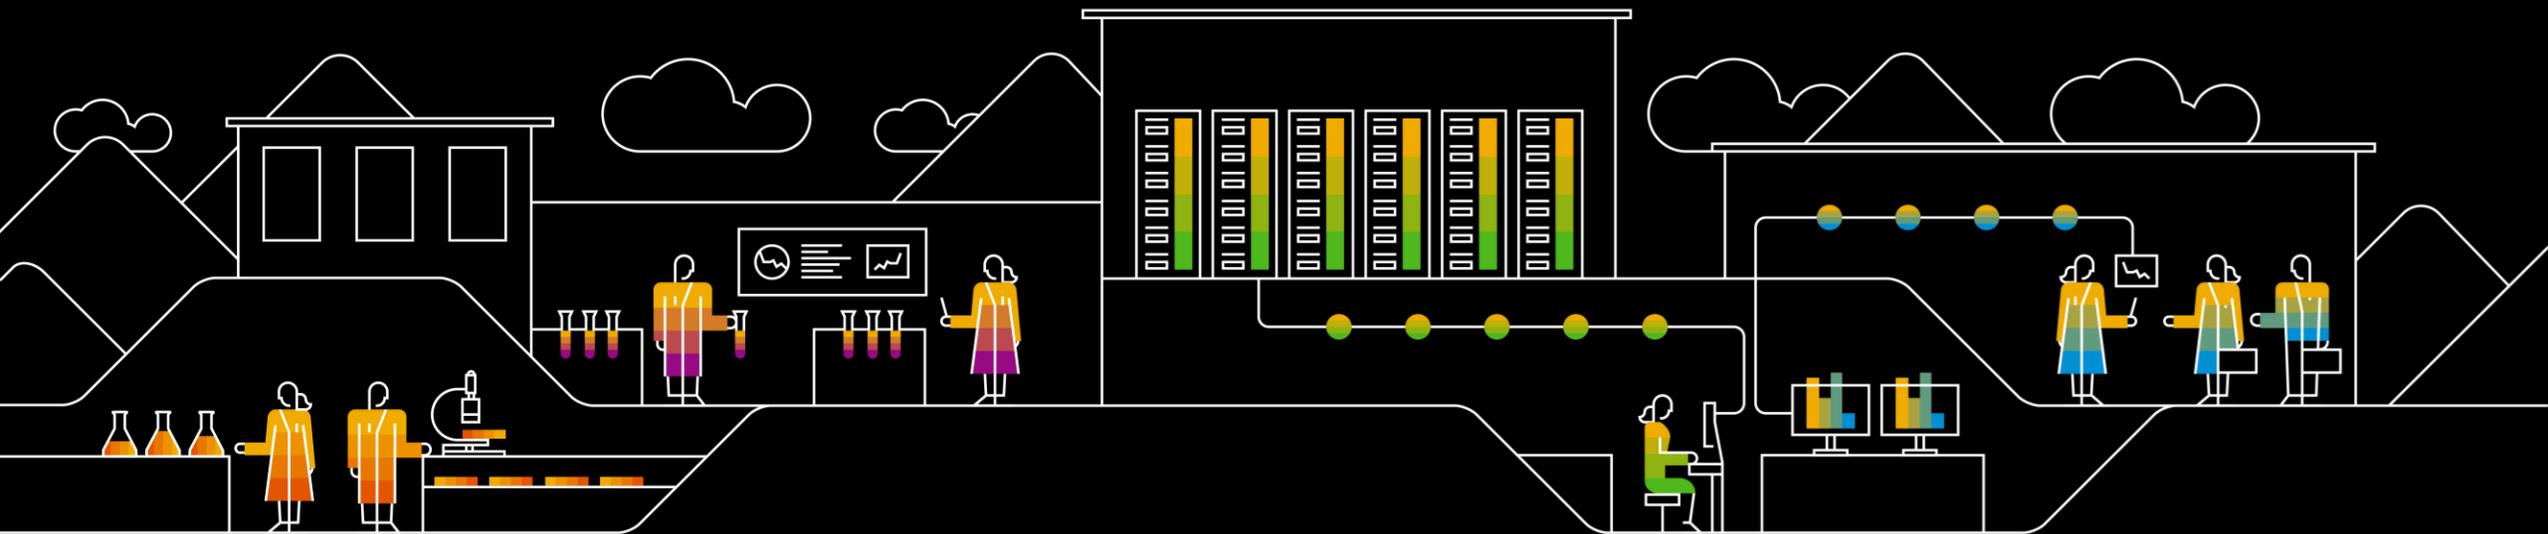

Business and Technical Requirements on catalog content

Business related topics as per Items available in Your Web-shop, Price, Availability T&Cs. Should be agreed with Buyer prior to enablement process.

Commodity Codes Required for Items

It is compulsory to associate a commodity code for each item in your Web-shop. A list of **commodity codes** is available in the Supplier Information Portal which is accessible from every Ariba Network account.

Web-shop Configuration

Supplier's must configure their website in order to **accept the ANID** of Buyer.

Consult cXML Documentation

In order to configure your website to transact and exchange Data with SAP Ariba Network and SAP Ariba Procurement Application via cXML. **cXML Solutions Guide** and the **cXML User Guide** are available in the Supplier Information Portal.

Security

Supplier's Punchout site must communicate through **HTTPS (Hyper Text Transfer Protocol Secure).** HTTPS protects all parties in Punchout sessions: Buyer Ariba Network, and the Punchout site.

Project Timelines

	Catalog Creation		Connectivity Setup in TEST			Buyer Testing		Move to Production
	Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8
