# SAP Business Network – Home Page Widgets - Customize

## What are the Home Page Widgets?

Homepage displays role-based widgets to help focus on important tasks, insights, KPIs and benchmarks for your business.

Examples of Home Page Widgets are Company Profile, Download App, and Activity Feed

Possible Widgets that can be displayed include Purchase Orders, Invoice Aging, My Leads, Application Gateway

You can add, remove, and rearrange widgets on your Home page from the Customize my widgets page.

## Customize Widgets

On the Home page, click Customize  in the My widgets area

On the Customize my widgets page, Click the plus sign icon (+) to add a widget.

Click the minus icon (-) to remove a widget or Select the two line icon in the center of the widget to move the widget

Once you are complete with your edits, click Save and you'll be returned to the Homepage

Benchmarking widget gives performance information being achieved by groups of companies in aggregate across SAP Business Network.

View a particular facet of performance in all or specific industries during a selected time range (last 12 months, last quarter, or last month).

KPI/Benchmarking widgets include history icon  that displays the latest data refresh. Data is refreshed monthly, and as needed.

You can compare the performance of your specific customer (KPI) to the aggregate performance of others on SAP Business Network (benchmarking).

Most KPI and benchmarking widgets require an enterprise account with bronze level or above, except the Paid invoices and On-time payment rate KPI widgets. The accuracy of the widgets may be impacted by problems with the buyer's integration with SAP Business Network.

The value of transactions is displayed in USD only. The intent of KPI and benchmarking widgets is to compare the customers performance to the aggregated behavior of the network. As such, the comparison and the standard for comparison is in USD

The SAP Business Network KPI framework includes intelligence to identify and exclude data outliers that may be bad data, test data, or otherwise interfere with the KPI calculation. Therefore, KPI calculations may not fully reconcile with the scheduled payments listed on SAP Business Network.
