API to Obtain and Update
Project Team Members in
Supplier Management
Projects

SM-41768

Target GA: February 2024

SAP

API to Obtain and Update Project Team Members in Supplier Management Projects

Description

- This feature adds an API endpoint that allows you to retrieve and modify project team members. Using the API, you can then add team members as approvers in supplier management projects such as supplier request, supplier registration, supplier qualification, and more.

Customer benefit

- Support for project team data export and updates via API provides a greater level of flexibility and extensibility for customers to execute their processes based on external data including approval workflows

User

- Buyer

Enablement model

- Automatically On

Applicable solution(s):

- SAP Ariba Supplier Lifecycle and Performance

Prerequisites, Restrictions, Cautions

Prerequisites

- You must make API calls before any associated approval tasks are triggered. When users respond to a questionnaire, the associated approval tasks become active immediately. As a result, attempts to modify users, user groups, or approvers via the API may not yield accurate results. To ensure that you make API calls before the approval tasks are triggered, you might consider setting up a to-do task as a predecessor for your approval workflow.
- To create an application and request access to use the SAP Ariba APIs relevant to this feature, you must have access to the SAP Ariba developer portal. For details refer to Steps to Start Using the SAP Ariba APIs in Help for the SAP Ariba Developer Portal.
- All queries made to this API must be authenticated using OAuth authentication. For details refer to SAP Ariba Developer Portal Authentication in Help for the SAP Ariba Developer Portal.

Restrictions

- For supplier management projects, this feature only supports the /teams endpoint; other API endpoints are **not** supported.

Feature details

This feature makes an SAP Ariba API available to supplier management projects. The `/projects/{projectId}/teams` endpoint allows you to retrieve and modify project team members. Using this endpoint, you can also add team members as approvers in supplier management projects such as supplier request, supplier registration, supplier qualification, and modular questionnaire.

```
1 [
2   {
3     "uniqueName": "jarvis",
4     "passwordAdapter": "PasswordAdapter1"
5   }
6 ]
```

```
1 {
2   "status": "ok",
3   "code": 200,
4   "messages": [
5     "Added the following users to the project group : jarvis"
6   ]
7 }
```

Thank you.
