

## Webcast Q&A

Contracts	Question	Answer
SC-21945	<p>what happens to the draft contracts of the suppliers which did not get awarded? Will the automatically be set to closed?</p>	<p><a href="#">Help Link</a></p>
SC-21945	<p>Does the baseline contract need to be published in order to be used during the RFP phase?</p>	<p>To negotiate with suppliers participating in the guided sourcing project, buyers can create supplier contracts. A supplier contract is a copy of the most recent baseline contract that is published. It contains the header data and documents, including the Main Agreement and the Contracts Line Items Document (CLID), from the baseline contract</p>
Sourcing	Question	Answer
SS-50641	<p>When would you use Disable Supplier invitation - SS-50641?</p>	<p>Hi, Users can still add suppliers in Sourcing Requests (initial step of the process), but this was not a problem, because this content was not copied to the event. However, later on, we had a new functionality appeared when creating the Sourcing Event, which copies every content from the Sourcing Request, including suppliers (if added in this document). This new functionality might affect some of our user flow so it is necessary to disable "Create Button" in Sourcing Request the same way it was done for the Event.</p>
SS-50729	<p>For SS-50729 - just for clarity, does that mean suppliers can't reply via email to a Ariba sent message or auto message.</p>	<p>They can still reply to the message, just not the email that they receive that message from. When the Reply-to fields is disabled. There will be a message:          - Advises recipients to not reply to the message and that any replies sent will not be deliverable.           - Provides an email address that recipients can send queries and requests to. For example, "For further information, send email to my.name@company.com."           In templates for SAP Ariba Sourcing event notifications, you can use the SPONSOR_EMAIL variable to include the email address of the event owner in the message.</p>

<b>Sourcing...</b>	<b>Question</b>	<b>Answer</b>
SS-51238	When mentioning the part of large files exceeding 100mb, what is the process to direct this to Ariba, and what is the possible TAT, as suppliers might experience this during last time of submission	Yes, it's still possible to enable. Please contact SAP Ariba support and state your corresponding event so they can review the case.
SS-51749	What will be the use for disabling publishing of an event?	Hi, this to give you some more flexibility. For example, if you want to test something with line items and suppliers, you can prevent users from accidentally publishing it and inviting everyone.
SS-51749	Can you give an example where we can use disable publish?	Hi, this to give you some more flexibility with the daily activity. For example, if you want to test something with line items and suppliers, some users might accidentally publish it and inviting everyone. With that you don't have to go back and pause/cancel the event, not to mention that you can find out about it too late.
SS-52849	For Item Rank Report do we have to maintain item in Ariba?	Hi, no you don't have to. As long as the event is in Open, Pending Selection, or Completed status and participants (suppliers) bid for the items. The report will be available for you.
SS-52849	How many members can be delegated, is there a limitation?	There is no limitation for it. The user member is not specific when you choose to delegate. You do it in template level and as long as they use that template, they will be delegated.
SS-54380	Is external approval API version 2 will be updated automatically? Do we need to make an update regarding to this change on version?	<a href="#">Help Link</a>

<b>Other</b>	<b>Question</b>	<b>Answer</b>
	I was advised that Ariba would be deploying the following Fix with the 2408 release. Is this type of fix not mentioned in type of Early Release presentation? 701753/2024 "Attachment" lines are coming over to event from the Guided Sourcing Template and/or Sourcing Library as a "Question"	Release Readiness addresses new features and enhancements. We do not provide updates on Fixes that might be released at the same time. Please check with your CSP or even ask in the case itself if the Fix was delivered as expected.
	Hey! How are you doing? I wanted to ask if Guided Sourcing's performance is going to improve when it releases fully at the end of the year.	Yes, this is one current development focus.
