Configure your SAP Business Network Language preferences

To define in which language you'd like to use the SAP Business Network and receive email notifications, you will need to update both your Browser Settings as well as your Preferred language within the SAP Business Network.

Browser Settings:

- The language browser settings define the language in which the SAPBN application will be displayed
- Here you can find a [knowledge article on how to adjust your browser language](#)
- The article includes the listing of languages maintained within Ariba – if selecting a browser language that is not supported by Ariba, the SAPBN application will default into English.

Preferred Language:

- The Preferred language within your SAPBN account defines the language for email notifications.
- Here you can find a [knowledge article on how to define your preferred language for email notifications](#).
- Please note the Preferred language within the SAP Business Network also defines in which language you will be able to see/reply to the Corteva questionnaire. Those are available in the following languages, so if selecting a language different form the ones below, the questionnaires will appear in English: German, Italian, French, Russian, Portuguese (Brazilian), Spanish (LA), Turkish, Romanian, Hungarian, and Greek.
  After July 2025 questionnaires will be available also in: Traditional Chinese, Simplifed Chinese, Japanese, Thai and Korean.
